## ACID Properties of the Database

01

Atomicity

If any statement in the transaction fails, the entire transaction fails, and the database is left unchanged.

02

Consistency

Transaction must meet all protocols defined by the system – no partially completed transactions.

03

Isolation

No transaction has access to any other transaction that is unfinished. Each transaction is independent.

04

Durability

Once a transaction has been committed, it will remain committed through the use of transaction logs and backups.
