Microorganisms in Agricultural Soil: Advances and Challenges of Biological Health Yanlong Chen,Cui Li,Cong

Wang ,Xiaomeng Wei,2026-01-12 The intricate roles of soil microorganisms in ecological processes such as organic matter decomposition nutrient cycling disease suppression and toxin transformation underscore their significance for maintaining soil health and ecosystem services crucial for food production and human well being However inadequate management practices have led to the deterioration of soil microbial communities resulting in compromised soil biological health This decline is evidenced by the proliferation of soil borne pathogens disruptions in nutrient cycling organic carbon depletion and heightened pollution risks Recent strides in high throughput omics technologies have revolutionized our understanding of soil microbial communities and their functions These cutting edge tools offer unprecedented insights into the complexity of microbial ecosystems shedding light on the mechanisms driving microbial ecological deterioration in the face of challenges such as soil pollution and climate change Despite growing recognition of the importance of soil biological health gaps persist in our understanding of the causes evolution and potential remedies for microbial ecological degradation This Research Topic endeavors to bridge these knowledge gaps by delving into the factors underlying the deterioration of soil microbial communities and its repercussions on soil ecosystem services It aims to explore strategies to enhance soil biological health and bolster agricultural sustainability By critically examining recent advancements and ongoing challenges in understanding

microbial communities in agricultural soils this research endeavor seeks to inform the development of innovative solutions for sustainable soil management and agricultural practices In this Research Topic we invite Original Research Review and Perspective articles covering Microorganisms in Agricultural soil Advances and Challenges of Biological Health The subtopics include but are not limited to 1 Cause and evolution of microbial ecological deterioration with a focus on its correlation with the prevalence of soil borne diseases and nutrient imbalances 2 Microbial mediated processes leading to the depletion of soil organic matter and emissions of greenhouse gases such as CO₂ and CH₄ 3 Evolution of soil microbial communities in polluted environments and the role of soil microorganisms in the transformation of pollutants including heavy metals antibiotics and microplastics 4 Novel microbial approaches to improve soil biological health including methods for enhancing nutrient availability controlling soil pathogens mitigating organic matter depletion and reducing pollution We enthusiastically welcome submissions that explore mechanistic insights and hypothesis driven research in soil microbial ecological deterioration We also invite submissions that address topics related to the development of evaluation criteria and advancements in technology for assessing microbial ecological deterioration and enhancing agricultural soil biological health By delving into these areas we aspire to advance our knowledge and foster the development of effective strategies for promoting soil health and sustainable agricultural practices

Sentinels of Health: Advancements in Monitoring and Surveillance of Vector-Borne Diseases in Domestic and Wild Animals and Vectors Vesna Milicevic, Francesco Mira ,Mihaela Kavran,2025-09-26 Studies related to vector borne diseases in both domestic and wild have seen significant advancements in their understanding influence and management These diseases once confined to specific regions or animal populations have seen their distribution and behavior altered due to climate change and human activities Additionally some of these diseases now pose zoonotic risks with the potential for direct transmission between animals and humans The effects of globalization and transportation have also played a role in surpassing traditional territorial boundaries for certain vector borne diseases The economic repercussions of these diseases are noteworthy encompassing direct veterinary care costs losses in livestock productivity and expenses related to disease control measures The main aim of this Research Topic is to address these diseases through a comprehensive approach that includes surveillance vector control methods vaccination strategies and public awareness initiatives Despite advancements in managing specific diseases new challenges emerge due to globalization and climate change highlighting the need for continuous research and adaptable control measures It is strongly recommended to enhance epidemiological surveillance and research the factors influencing vector abundance and distribution as these can aid in predicting disease outbreaks and designing effective control strategies
