Programming And Meta Programming In Scheme:

Programming and Meta-Programming in Scheme Jon Pearce, 1998 By now Scheme is a well established programming language and is finding increasing popularity in programming courses for undergraduates Its expressive capabilities are matched by a simplicity of language and ease of use which have made its adherents disciples This textbook provides a comprehensive first course in Scheme and covers all of its major features abstraction functional programming data types recursion and semantic programming Although the primary goal of this text is to teach students to program in Scheme it will be suitable for any student studying a general programming principles course Each chapter is divided into three sections core appendix and problems Most essential topics are covered in the core section but it is assumed that most students will read the appendices and solve most of the problems Nearly all of the problems require students to write short Scheme procedures As well as providing a thorough grounding in Scheme the author discusses in depth different programming paradigms An important theme throughout is that of meta programming the perspective that programs themselves can be treated as data and hence can be analyzed and modified as objects This provides insight into topics such as type checking and overloading which might otherwise be missed *Programming and Meta-Programming in Scheme* Jon

Pearce, 1997-12-01 **Programming Language Implementation and Logic Programming** Pierre Deransart, Jan Maluszynski, 1990-08-08 This volume consists of the papers accepted for presentation at the second international workshop on Programming Language Implementation and Logic Programming PLILP 90 held in Linköping Sweden August 20-22 1990 The aim of the workshop was to identify concepts and techniques used both in implementation of programming languages regardless of the underlying programming paradigm and in logic programming The intention was to bring together researchers working in these fields The volume includes 26 selected papers falling into two categories Papers in the first category present certain ideas from the point of view of a particular class of programming languages or even a particular language The ideas presented seem to be applicable in other classes of languages Papers in the second category directly address the problem of integration of various programming paradigms The proceedings of the predecessor workshop PLILP 88 held in Orleans France May 16-18 1988 are available as Lecture Notes in Computer Science Vol 348
