The Zoological Record , 1987 **Phospholipid Biosynthesis** Edward A. Dennis, Dennis E. Vance, 1992 This volume provides up to date information on the purification and characterization of the enzymes involved in phospholipid biosynthesis and on the mechanisms utilized by cells for the transfer of phospholipids It also includes protocols for generating phospholipid biosynthetic mutants *Alcohol and the Cell* Emanuel Rubin, 1987 *Mechanism(s) of Selective Localization of Phospholipid Ethers in Tumor Vs Nontumor Tissue* Kathleen Pogacich Plotzke, 1992 *Platelet-Activating Factor and Related Lipid Mediators* F. Snyder, 1987-08-31 Platelet activating factor PAF is the commonly used name for a group of potent biologically active ether linked phospholipids the alkylacetyl glycerophospho cholines Following the identification of

the chemical structure of PAF in 1979 much progress has been made in our understanding of these phospholipid mediators. This is particularly true from the points of view of their molecular structural requirements for expression of biological activity, their biosynthesis and catabolism, their diverse range of biological activities, evidence for their specific receptors at the cell surface, the development of specific antagonists for use in receptor studies and for testing as potential anti-PAF drugs and implications about their involvement in health and disease. Chapters in this book cover the current status of these general areas of PAF research. Although an enormous amount of information has been published about this interesting new type of phospholipid mediators, questions about their mechanism of action, regulatory controls and the precise role and relative importance of PAF in specific diseases and physiological functions remain to be answered. Since the 1979 discovery, the PAF field has brought together scientists from a variety of different biomedical disciplines. The diversity of scientists now in PAF research is very apparent from the number of PAF publications appearing in a wide array of scientific journals ranging from molecular biology to clinical medicine. Publications related to PAF continue to increase at an amazingly rapid rate with the pace reminiscent of the period following the discovery of prostaglandins.
