Progress In Optics Vol 20 Progress In Optics S:

Progress in Optical Fibers Research Zhijian Guo,2007 This book presents new and important research on optical fibres An optical fibre is a glass or plastic fibre designed to guide light along its length by confining as much light as possible in a propagating form In fibres with large core diameter the confinement is based on total internal reflection In smaller diameter core fibres widely used for most communication links longer than 200 meters the confinement relies on establishing a waveguide Fibre optics is the overlap of applied science and engineering concerned with such optical fibres Optical fibres are widely used in fibre optic communication which permits transmission over longer distances and at higher data rates than other forms of wired and wireless communications They are also used to form sensors and in a variety of other applications The term optical fibre covers a range of different designs including graded index optical fibres step index optical fibres birefringent polarisation maintaining fibres and more recently photonic crystal fibres with the design and the wavelength of the light propagating in the fiber dictating whether or not it will be multi mode optical fibre or single mode optical fibre Because of the mechanical properties of the more common glass optical fibres special methods of splicing fibres and of connecting them to other equipment are needed Manufacture of optical fibres is based on partially melting a chemically doped preform and pulling the flowing material on a draw tower Fibers are built into different kinds of cables depending on how they will be used Recent Progress in Optical Fiber Research Moh Yasin,Sulaiman Wadi Harun,Hamzah

Arof,2012-01-25 This book presents a comprehensive account of the recent progress in optical fiber research It consists of four sections with 20 chapters covering the topics of nonlinear and polarisation effects in optical fibers photonic crystal fibers and new applications for optical fibers Section 1 reviews nonlinear effects in optical fibers in terms of theoretical analysis experiments and applications Section 2 presents polarization mode dispersion chromatic dispersion and polarization dependent losses in optical fibers fiber birefringence effects and spun fibers Section 3 and 4 cover the topics of photonic crystal fibers and a new trend of optical fiber applications Edited by three scientists with wide knowledge and experience in the field of fiber optics and photonics the book brings together leading academics and practitioners in a comprehensive and incisive treatment of the subject This is an essential point of reference for researchers working and teaching in optical fiber technologies and for industrial users who need to be aware of current developments in optical fiber research areas
