

Propositional logic (PL)

- A simple language useful for showing key ideas and definitions
- User defines a set of propositional symbols, like P and Q.
- User defines the semantics of each of these symbols, e.g.:
 - P means "It is hot"
 - Q means "It is humid"
 - R means "It is raining"
- A sentence (aka formula, well-formed formula, wff) defined as:
 - A symbol
 - If S is a sentence, then $\sim S$ is a sentence (e.g., "not")
 - If S is a sentence, then so is (S)
 - If S and T are sentences, then $(S \vee T)$, $(S \wedge T)$, $(S \Rightarrow T)$, and $(S \Leftrightarrow T)$ are sentences (e.g., "or," "and," "implies," and "if and only if")
 - A finite number of applications of the above

Propositional Logic:

Mathematical Logic through Python Yannai A. Gonczarowski, Noam Nisan, 2022-07-31 Using a unique pedagogical approach this text introduces mathematical logic by guiding students in implementing the underlying logical concepts and mathematical proofs via Python programming This approach tailored to the unique intuitions and strengths of the ever growing population of programming savvy students brings mathematical logic into the comfort zone of these students and provides clarity that can only be achieved by a deep hands on understanding and the satisfaction of having created working code While the approach is unique the text follows the same set of topics typically covered in a one semester undergraduate course including propositional logic and first order predicate logic culminating in a proof of Gödel's completeness theorem A sneak peek to Gödel's incompleteness theorem is also provided The textbook is accompanied by an extensive collection of programming tasks code skeletons and unit tests Familiarity with proofs and basic proficiency in Python is assumed

Critical Reflection Robert Malcolm Murray, Nebojsa Kujundzic, 2005 In an era of information overload our need to learn how to critically evaluate the growing flood of information has never been greater Critical Reflection showcases the role of reason in a world saturated by media enhanced persuasion and complex scientific and technological jargon Drawing from the classic philosophical texts this engaging textbook on the art of analyzing arguments is also relevant to today's undergraduates in its use of real life examples and exercises drawn mainly from media and politics Malcolm Murray and Nebojsa Kujundzic cover the standard subjects in a one semester course on critical thinking offering ways to analyze arguments

Rigorous Software Development José Bacelar Almeida, Maria João Frade, Jorge Sousa Pinto, Simão Melo de Sousa, 2011-01-04 The use of mathematical methods in the development of software is essential when reliable systems are sought in particular they are now strongly recommended by the official norms adopted in the production of critical software Program Verification is the area of computer science that studies mathematical methods for checking that a program conforms to its specification This text is a self contained introduction to program verification using logic based methods presented in the broader context of formal methods for software engineering The idea of specifying the behaviour of individual software components by attaching contracts to them is now a widely followed approach in program development which has given rise notably to the development of a number of behavioural interface specification languages and program verification tools A foundation for the static verification of programs based on contract annotated routines is laid out in the book These can be independently verified which provides a modular approach to the verification of software The text assumes only basic knowledge of standard mathematical concepts that should be familiar to any computer science student It includes a self contained introduction to propositional logic and first order reasoning with theories followed by a study of program verification that combines theoretical and practical aspects from a program logic a variant of Hoare logic for programs containing user provided annotations to the use of a realistic tool for the verification of C programs annotated

using the ACSL specification language through the generation of verification conditions and the static verification of runtime errors

Contemporary Polish Ontology Bartłomiej Skowron, 2019-11-18 This book is a collection of articles authored by renowned Polish ontologists living and working in the early part of the 21st century Harking back to the well known Polish Lvov Warsaw School founded by Kazimierz Twardowski we try to make our ontological considerations as systematically rigorous and clear as possible i e to the greatest extent feasible but also no more than the subject under consideration itself allows for Hence the papers presented here do not seek to steer clear of methods of inquiry typical of either the formal or the natural sciences on the contrary they use such methods wherever possible At the same time despite their adherence to rigorous methods the Polish ontologists included here do not avoid traditional ontological issues being inspired as they most certainly are by the great masters of Western philosophy from Plato and Aristotle through St Thomas and Leibniz to Husserl to name arguably just the most important
