**Life-Cycle of Structures Under Uncertainty** Dan M. Frangopol, Sunyong Kim, 2019-07-25 Life cycle analysis is a systematic tool for efficient and effective service life management of deteriorating structures. In the last few decades, theoretical and practical approaches for life cycle performance and cost analysis have been developed extensively due to increased demand on structural safety and service life extension. This book presents the state of the art in life cycle analysis and maintenance optimization for fatigue sensitive structures. Both theoretical background and practical applications have been provided for academics, engineers, and researchers. Concepts and approaches of life cycle performance and cost analysis developed in recent decades are presented. The major topics covered include: a) probabilistic concepts of life cycle performance and cost analysis; b) inspection monitoring and maintenance for fatigue cracks; c) estimation of fatigue crack detection; d) optimum inspection and monitoring planning; e) multi-objective life cycle optimization; and f) decision making in life cycle analysis. Life cycle optimization covered in the book considers probability of fatigue crack detection, fatigue crack damage, detection time, maintenance times, probability of failure, service life, and total life cycle cost. For the practical application and integration of recently developed approaches for inspection and maintenance planning, efficient and effective multi-objective optimization and decision making are presented. This book will help engineers engaged in civil and marine structures, including students, researchers, and practitioners, with reliable and cost-effective maintenance planning of fatigue sensitive structures and to develop more advanced approaches and techniques in the field of life cycle maintenance optimization and safety of structures under various aging and deteriorating conditions.

Covers illustrative examples and recent development for optimum service life management. Deals with various structures such as bridges and ships subjected to fatigue.

**Marine Structures** Erkan Oterkus, 2020-01-31 Structural mechanics is an important field of engineering. The main goal of structural mechanics is to ensure that structures are safe and durable so that catastrophic situations can be prevented, which can otherwise cause loss of life, environmental pollution, and financial losses. Depending on the uses of the structure and the conditions that the structure is subjected to, special treatment may be required for the analysis. Specifically, marine structures are subjected to harsh environmental conditions due to the marine environment, which can cause several different damage mechanisms, including fatigue and corrosion. This book on Marine Structures considers a wide range of areas related to marine structures and provides a compilation of numerical and experimental studies related to Marine Structures research.
