**Multivariate Analysis of Ecological Data Using CANOCO** Jan Lepš, Petr Šmilauer, 2003 *Multivariate Analysis of Ecological Data Using CANOCO* Jan Lepš, Petr Šmilauer, 2003-05-29 This book is primarily written for ecologists needing to analyse data resulting from field observations and experiments It will be particularly useful for students and researchers dealing with complex ecological problems such as the variation of biotic communities with environmental conditions or the response of biotic communities to experimental manipulation Following a simple introduction to ordination methods the text focuses on constrained ordination methods RDA CCA and the use of permutation tests on statistical hypotheses of multivariate data An overview of classification methods or modern regression methods GLM GAM loess is provided and guidance on the correct interpretation of ordination diagrams is given Seven case studies of varying difficulty help to illustrate the suggested analytical methods using the Canoco for Windows software The case studies utilise both the descriptive and manipulative approaches and they are supported by data sets and project files available from the book website [Multivariate Analysis of Ecological Data using CANOCO 5](#) Petr Šmilauer, Jan Lepš, 2014-04-17 An accessible introduction to the theory and practice of multivariate analysis for graduates researchers and professionals dealing with ecological problems [Multivariate Analysis of Ecological Data using CANOCO 5](#) Petr Šmilauer, Jan Lepš, 2014-04-17 This revised and updated edition focuses on constrained ordination RDA CCA variation partitioning and the use of permutation tests of statistical hypotheses about multivariate data Both classification and modern regression methods GLM GAM loess are reviewed and species functional traits and spatial structures analysed Nine case studies of varying difficulty help to illustrate the suggested analytical methods using the latest version of Canoco 5 All studies utilise descriptive and manipulative approaches and are supported by data sets and project files available from the book website <http://regent.prf.jcu.cz/maed2> Written primarily for community ecologists needing to analyse data resulting from field observations and experiments this book is a valuable resource to students and researchers dealing with both simple and complex ecological problems such as the variation of biotic communities with environmental conditions or their response to experimental manipulation **Analyzing Ecological Data** Alain Zuur, Elena N. Ieno, Graham M. Smith, 2007-08-29 Which test should I apply During the many years of working with ecologists biologists and other environmental scientists this is probably the question that the authors of this book hear the most often The answer is always the same and along the lines of What are your underlying questions What do you want to show The answers to these questions provide the starting point for a detailed discussion on the ecological background and purpose of the study This then gives the basis for deciding on the most appropriate analytical approach Therefore a better starting point for an ecologist is to avoid the phrase test and think in terms of analysis A test refers to something simple and unified that gives a clear answer in the form of a p value something rarely appropriate for ecological data In practice one has to apply a data exploration check assumptions validate the models

perhaps apply a series of methods and most importantly interpret the results in terms of the underlying ecology and the ecological questions being investigated Ecology is a quantitative science trying to answer difficult questions about the complex world we live in Most ecologists are aware of these complexities but few are fully equipped with the statistical sophistication and understanding to deal with them
