**Target Search Problems** Denis Grebenkov, Ralf Metzler, Gleb Oshanin, 2024-12-26 This book presents cutting edge research addressing the mathematical models used to tackle the Target problem as it manifests itself in a wide range of disciplines. Leading international experts from around the world describe a variety of different approaches to this truly multidisciplinary topic. Recent years have witnessed a substantial and still growing interest in understanding the general Target problem. This encompasses a wide range of different situations in which some agents perform a deterministic or stochastic motion to search for a certain immobile or mobile target. Such problems arise in many disciplines to name but a few: computer science, the evolution of stock markets, biochemistry, bio medicine, evolutionary games, as well as diverse areas of physics. This book, with its up-to-date collection of chapters authored by leading experts in these and other fields, provides a comprehensive and complete picture in broadly accessible language. The book will naturally serve as a source of inspiration for further research, as well as facilitating a cross-fertilization of approaches, ideas, and research directions. **English**
