Mathematics and Democracy Steven J. Brams, 2009-12-02 Voters today often desert a preferred candidate for a more viable second choice to avoid wasting their vote Likewise parties to a dispute often find themselves unable to agree on a fair division of contested goods In *Mathematics and Democracy* Steven Brams a leading authority in the use of mathematics to design decision making processes shows how social choice and game theory could make political and social institutions more democratic Using mathematical analysis he

develops rigorous new procedures that enable voters to better express themselves and that allow disputants to divide goods more fairly One of the procedures that Brams proposes is approval voting which allows voters to vote for as many candidates as they like or consider acceptable There is no ranking and the candidate with the most votes wins The voter no longer has to consider whether a vote for a preferred but less popular candidate might be wasted In the same vein Brams puts forward new more equitable procedures for resolving disputes over divisible and indivisible goods *John Calvin* Anthony N.S. Lane,2025-11-13 This volume continues the approach of the original *John Calvin Student of the Church Fathers* It begins with eighteen methodological theses on how to study Calvin s use of the patristic and medieval tradition There are comprehensive studies of his use of Tertullian Ambrose Augustine Cyril of Alexandria and Peter Lombard Each of these is followed by tables with details of Calvin s citations and their sources Finally there are comprehensive annotated bibliographies of the secondary literature on the topic published from 1800 to 1999 and from 2000 to 2024 *Epoch - Bloodlines* , *Recueil Consulaire* *Contenant les Rapports Commerciaux des Agents Belges à L'Étranger* Belgium.
