

The revolution of the printing press

Invented by Johannes Gutenberg toward 1450, the printing press of movable types allowed the edition of books in series for the first time. This revolution in the transmission of ideas and knowledge was decisive for the quick diffusion of the Renaissance thinking.

Advanced Printing was introduced in the Middle Ages in the West, and it allowed for the first time the printing of books in series. This was a revolutionary step in the history of printing.

Printing in the East was already known in the East, but it was not until the 15th century that it reached Europe. This was a crucial moment in the history of printing.

Gutenberg's contributions

The process of printing from early movable type was laborious and slow. Gutenberg's invention of the printing press allowed for the mass production of books, which was a revolutionary step in the history of printing.

From the world to the press

To print a text with these letters, one used a tray with the type, another tray with the paper, and a tray with the ink. The ink was spread on the tray with the press, and the paper was placed on top. The press was then used to print the text, and the ink was spread on the tray with the press.

Type tray The tray where the type is placed, usually the same as the one used for the ink.

Hand crank The hand crank is used to operate the press, and it is usually made of wood.

The production of movable metallic types

Gutenberg made metallic types with lead, alloying them with tin and antimony. This provided a firm substance for the characters and allowed for the mass production of books.
