Mental Representations The Interface Between Language And Reality:

Mental Representations Ruth M. Kempson, 1989-01-27 The attempt to study language as part of cognitive science is apparently being thwarted by the lack of contact and inferential links between current theoretical paradigms This dynamic collection provides an overview of the relationship between linguistic form and interpretation as exemplified by the most influential of these paradigms the current Chomskian Government and Binding paradigm the conflicting Situation Semantics paradigm the Davidsonian programme and finally the new relevance theory of cognition and pragmatics More ambitiously it works towards an overall theory of cognition which the editor believes has been facilitated by the assumptions and claims of relevance theory The contributors to the volume are well known for their work at the language cognition interface and each essay is a stimulating and insightful consideration of the problem The editor's introduction will be invaluable to any reader not fully conversant with current theory providing the necessary background and her concluding essay is a brilliant exposition of the way in which Relevance Theory can create links whereby apparently disparate views are combined into a unified modular account of language and cognitive processes

Mental Representations Ruth M. Kempson, 1988 This dynamic collection provides an overview of the relationship between linguistic form and interpretation as exemplified by the most influential of these paradigms the current Chomskian Government and Binding paradigm the conflicting Situation Semantics paradigm the Davidsonian programme and finally the new relevance theory of cognition and pragmatics

The Interface between Scientific and Technical Translation Studies and Cognitive Linguistics Ralph Krüger, 2015-04-17

Scientific and Technical Translation STT is a highly complex and knowledge intensive field of translation and cognitive linguistics is a usage based linguistic framework which provides powerful theoretical tools for modelling knowledge organisation and representation in discourse This book explores the interface between scientific and technical translation studies and cognitive linguistics by discussing the epistemological contextual textual and cross linguistic dimensions of scientific and technical translation from a cognitive linguistic perspective Particular emphasis is placed on explicitation and implicitation as indicators of the interaction between text and context in STT The corpusbased investigation of the two phenomena illustrates the complex knowledge requirements pertaining to scientific and technical translation and demonstrates the explanatory power of cognitive linguistics with regard to important textual and contextual aspects of STT

The Metaphysics and the Epistemology of Meaning Jonas Pfister, 2007 This book develops the metaphysics of meaning along the lines set up by Paul Grice defining the three central notions of what is meant said and implicated The Gricean notion of what is said is threatened by semantic underdetermination If the sentence underdetermines the thought it is used to express what is said cannot be the proposition expressed by the sentence and meant by the speaker This leads to several questions How far does semantic underdetermination reach Do we have to extend or restrict the Gricean notion Is what is said semantic or pragmatic Keeping

these metaphysical questions separate from the epistemological question of how the hearer understands what is meant which is best explained by generalizing the Gricean theory of implicature derivation and combining it with a game theoretic model this book provides an original defense of a Gricean view in the ongoing debate about semantics and pragmatics Jonas Pfister is a member of the meaning c9 research group at the University of Berne Switzerland
