Shubnikov, 1960 Principles of Optical Crystallography Aleksei Vasilévich Shubnikov, 2013-07 *Optical Crystallography Simplified* F. Donald Bloss, 2017 Optical Mineralogy C.D. Gribble, 2012-12-06 This book is the successor to A practical introduction to optical mineralogy which was written in the early 1980s and published by George Allen Unwin in 1985 Our intention once again is to introduce the student of geology to the microscopic examination of minerals by both transmitted and reflected light These techniques should be mastered by students early in their careers and this text has been proposed in the full awareness that it will be used as a laboratory handbook serving as a quick reference to the properties of minerals However care has been taken to present a systematic explanation of the use of the microscope as well as to include an extended explanation of the theoretical aspects of optical crystallography in transmitted light The book is therefore intended as a serious text that introduces the study of minerals under the microscope to the intending honours student of geology as well as providing information for the novice or interested layman *Materials Handbook* François Cardarelli, 2008-03-19 This unique and practical book provides quick and easy access to data on the physical and chemical properties of all classes of materials The second edition has been much expanded to include whole new families of materials while many of the existing families are broadened and refined with new material and up to date information Particular emphasis is placed on the properties of common industrial materials in each class Detailed appendices provide additional information and careful indexing and a tabular format make the data quickly accessible This book is an essential tool for any practitioner or academic working in materials or in engineering *Bryn Mawr College Calendar* Bryn Mawr College, 1924 *Calendar* Bryn Mawr College, 1896 Science Libraries Consolidated Short-title Catalog of Books University of Rochester.
