Selfish Gene Pool An Evolutionary Stable System:

The Selfish Gene Pool D. M. Wonderly, 1996-10-24 The Selfish Gene Pool was written to encourage dialogue on the issue of the claim that all people are destined to act selfishly in all situations whether they are aware of it or not because their fitness in resulting generations depends on it This book provides an overview of a motivation model designed to support a positive interpretation of altruistic behavior It specifically denies the claims of sociobiologists selfish gene theory and provides a thorough rebuttal of their argument Unfortunately the sociobiological analysis of behavior ignores the influence of a moral sense and the fact that altruistic behavior which they deny exists is directed not toward the resident gene but toward the totality of the relevant gene pool In spite of the criticism that has been leveled at sociobiologist extremists nothing has appeared in print that represents an alternative explanation for altruistic behavior

The Emergence of Culture Philip Chase, 2006-09-27 Paleolithic archaeologists and human paleontologists have failed to address the origins of a phenomenon that is both absolutely central to the human way of life and unique to our species In all species of mammals there are codes rules concepts values etc that govern behavior Among humans and only among humans some of these codes are created socially through interactions among individuals Human culture is thus an emergent phenomenon one that cannot be understood without taking into account the interactions among individuals Other species may learn codes socially from their parents or other members of their species but the codes are not created socially Because human society creates the culture that governs individual behavior it can control individual members in a way that other primate societies cannot Culture can facilitate cooperative and group activities but can also lead individuals to behave contrary to their own evolutionary best interests This book describes the emergent nature of human culture It proposes hypotheses to explain how a phenomenon that is potentially maladaptive for individuals could have evolved and to explain why culture plays such a pervasive role in human life It then reviews the primatological fossil and archaeological data to test these hypotheses

From Darwinian Metaphysics Towards Understanding the Evolution of Evolutionary Mechanisms Momme von Sydow, 2012 Although Charles Darwin predicted that his theory would give zest to metaphysics even he would be astonished at the variety of paths his theory has in fact taken This holds with regard to both gene Darwinism a purified Darwinian approach biologizing the social sciences and process Darwinism found in the disciplines of psychology philosophy of science and economics Although Darwinism is often linked to highly confirmed biological theories some of its interpretations seem to profit from tautological claims as well where scientific reputation cloaks ideological usage This book discusses central tenets of Darwinism historically as well as systematically for example the history of different Darwinian paradigms the units of selection debate and the philosophical problem of induction as basis of metaphysical Darwinism Crucially the book addresses the Darwinian claim that evolution is governed by an immutable and unrelentingly cruel law of natural selection Paradoxically Darwins theory is a static non evolutionary theory of evolution The current book sketches the historical background and provides

suggestions that may help to replace this approach by the idea of an evolution of evolutionary mechanisms see Escher's Drawing Hands on the cover This view even suggests a tendency to overcome the blindness of the knowledge acquisition of primordial Darwinian processes and allows for some freedom from external environments This book first develops a radically Darwinian approach then criticises this approach from within Even Darwinism has a tendency to transcend itself Although the book addresses several empirical issues it does not challenge particular findings Instead it builds on many insights of Darwinism and provides a proposal for interpreting known empirical evidence in a different light It should help pave the way for further developing an understanding of nature that transcends Darwinian metaphysics Publisher's description

The Selfish Gene Richard Dawkins, 1989 Science need not be dull and bogged down by jargon as Richard Dawkins proves in this entertaining look at evolution The themes he takes up are the concepts of altruistic and selfish behaviour the genetical definition of selfish interest the evolution of aggressive behaviour kinship theory sex ratio theory reciprocal altruism deceit and the natural selection of sex differences Should be read can be read by almost anyone It describes with great skill a new face of the theory of evolution W D Hamilton Science

The Grand Coherence: A Modern Defense of Christianity Nathanael Smith, 2023-11-21 A sweeping apologetic work The Grand Coherence starts from first philosophy wrestling with the question of answering the skeptic and how to decide what to believe A preliminary answer to that is based on Bayes Law and convergence of belief in the face of accumulating evidence But that is thrown into confusion by the resurrection of Christ a unique case where one of two extremely improbable beliefs a man rising from the dead or a spontaneous motiveless highly successful hoax must be true The challenge of the resurrection compels us to probe deeply into the origins of worldviews While Bayesian processing of evidence combined with critical reasoning in pursuit of consistency can do much ultimately it takes a dash of Platonism of trust in the reality of ideas to avoid falling into skepticism Science the accumulation of knowledge about physical nature through hypothesis testing has accomplished so much that some are tempted to think it describes everything that there is Yet physics now requires not only a causer for the Big Bang but an explanation of the fine tuning of natural laws to make it suitable for life questions to which God is the only sensible answer And despite the dogmatism of biologists life probably has far too much complexity to be explicable by mere chance based evolution Scientific materialism falls above all to the argument from reason for if physicalist explanations of the mind are accepted reason becomes untrustworthy which in turn pulls the rug out from under scientific materialism It turns out moreover that the scientific natural history of today fits strikingly well with Genesis 1 the days are periods of time not 24 hours and that Darwinian sociobiology combined with the Golden Rule supplies a comprehensive warrant for traditional Christian sexual ethics With certain errors out of the way a searching look at life experience and the natures of things leads to the conviction that the world is intensely good but also vitiated suffering disintegrating This is pre Christianity the commonsense theology of creation and fall yet it is too strange to be believed Why would the good Maker of this good universe let it run down and

unravel like that So it s rational to be on the lookout for something different for God to make His move to rescue the world and mankind has believed in all sorts of wild rumors and superstitions in the hope of that But one of the rumors turns out on investigation to be true Jesus Christ the one perfect man who ever lived rose from the dead And he left behind the Church enduring through the ages in supernatural superiority to all the laws of history We want to be redeemed somehow rescued from the death and disintegration to which we are fated by the laws of this world and God has promised to rescue us though His plans for doing so seem mad And yet in the incomprehensible miracle that God became a man lived and taught and suffered as a man lies the key to hope In a nutshell the argument updates the philosophy of CS Lewis to incorporate scientific and philosophical discoveries since his death

The British National Bibliography Arthur James Wells,1998 **Bibliographic Guide to Psychology** New York Public Library. Research Libraries,1997 Waves of Change Patrick Callioni,2010 Written in the middle of a global economic crisis this book is about a better future Patrick Callioni identifies and describes the major waves of change that are coming our way over the next decade or so and then provides practical advice on what to do or avoid doing to benefit most or suffer least from what is to come He describes some of the problems with the present regime of regulation We are regulating to catch the motes of dust floating in the air rather than the beams that end up poking out the eyes of our financial markets and suggests regulation should focus on rewarding the good rather than punishing the bad He also analyzes some of the behavior that helped to create the Credit Crunch They took healthy debt mortgage debt that was likely to be repaid mixed it up with toxic debt mortgage debt not likely to be repaid and then sold the debt on as prime safe debt creating untold damage Then he presents the waves of change that are coming the challenges of new technologies the business opportunities opened by reactions to climate change and demographic changes as workers and managers are no longer predominantly baby

boomers He also warns of future signs of impending financial setbacks that should be avoided A financial crisis will occur only when the fuel is there in the form of an investment bubble In his previous book Compliance and Regulation in the Financial Services Industry Patrick Callioni successfully predicted most of the course of the current economic downturn Over regulation is as dangerous as under regulation so he proposes the creation of a federated network of trust Throughout this exciting book he emphasizes the increasing importance of knowledge capital value that is not captured by existing accounting standards and in particular soft intangibles knowledge assets time assets motivational assets etc and he proposes guidance on their measurement and profitable management *Foundation* ,2002 **The Re-evaluation of Existing Values and the Search for Absolute Values** ,1979
