## **Pattern Discovery In Biomolecular Data Tools Techniques And Applications:**

**Pattern Discovery in Biomolecular Data** Jason T. L. Wang, Bruce A. Shapiro, Dennis Shasha, 1999-10-28 Finding patterns in biomolecular data particularly in DNA and RNA is at the center of modern biological research. These data are complex and growing rapidly so the search for patterns requires increasingly sophisticated computer methods. *Pattern Discovery in Biomolecular Data* provides a clear up to date summary of the principal techniques. Each chapter is self contained and the techniques are drawn from many fields including graph theory information theory statistics genetic algorithms computer visualization and vision. Since pattern searches often benefit from multiple approaches the book presents methods in their purest form so that readers can best choose the method or combination that fits their needs. The chapters focus on finding patterns in DNA RNA and protein sequences finding patterns in 2D and 3D structures and choosing system components. This volume will be invaluable for all workers in genomics and genetic analysis and others whose research requires biocomputing.

**Data Mining Patterns: New Methods and Applications** Poncelet, Pascal, Masegla, Florent, Teisseire, Maguelonne, 2007-08-31 This book provides an overall view of recent solutions for mining and explores new patterns offering theoretical frameworks and presenting challenges and possible solutions concerning pattern extractions emphasizing research techniques and real world applications. It portrays research applications in data models methodologies for mining patterns multi relational and multidimensional pattern mining fuzzy data mining data streaming and incremental mining. **Handbook of Massive Data Sets** James Abello, Panos M. Pardalos, Mauricio G.C. Resende, 2013-12-21 The proliferation of massive data sets brings with it a series of special computational challenges. This data avalanche arises in a wide range of scientific and commercial applications. With advances in computer and information technologies many of these challenges are beginning to be addressed by diverse inter disciplinary groups that include computer scientists mathematicians statisticians and engineers working in close cooperation with application domain experts. High profile applications include astrophysics bio technology demographics finance geographical information systems government medicine telecommunications the environment and the internet. John R Tucker of the Board on Mathematical Sciences has stated My interest in this problem Massive Data Sets is that I see it as the most important cross cutting problem for the mathematical sciences in practical problem solving for the next decade because it is so pervasive. The *Handbook of Massive Data Sets* is comprised of articles written by experts on selected topics that deal with some major aspect of massive data sets. It contains chapters on information retrieval both in the internet and in the traditional sense web crawlers massive graphs string processing data compression clustering methods wavelets optimization external memory algorithms and data structures the US national cluster project high performance computing data warehouses data cubes semi structured data data squashing data quality billing in the large fraud detection and data processing in astrophysics air pollution biomolecular data earth observation and the environment.
