In the book *Memory Practices in the Sciences*, Geoffrey C. Bowker discusses the relationship between infrastructures and supporting information used to record knowledge and construct a memory of science (such as manuscripts, printed matter, archives and data bases, among others); and the development of knowledge and information itself. The author not only considers the technical aspects of this debate, but also their socio-political dimensions.

Executive director of the Centre for Science, Technology and Society of the University of Santa Clara, in Silicon Valley, California, Bowker was the first Regis and Dianne McKenna Professor in Science, Technology and Society. Previously, Bowker worked in the Centre de Sociologie de l'Innovation, Paris and the Graduate School of Library and Information Science in Urbana-Champaign, Illinois. Furthermore, he was a Professor at the Department of Communication at the University of California, San Diego.

With *Memory Practices in the Sciences*, he gives continuity to his academic project initiated in previous works, especially *Sorting Things Out: Classification and Its Consequences* (co-authored with Susan Leigh Star, MIT Press, 2000) and *Science on the Run: Information Management and Industrial Science at Schlumberger, 1920-1940* (MIT Press, 1994).

His focus of interest again falls on the field of classification and standardisation and its role within the infrastructure of information, particularly in the development of that which is called scientific "cyberinfrastructure" and its social and organisational features. Bowker is especially concerned about the relationships between these subjects and collaborative scientific work, data sharing and the use of computer science in biodiversity studies. The author defines the central question in this field as being
