Men Machines:

Men, Machines, and Modern Times Elting Elmore Morison, 1968 *Men Machines and Modern Times* though ultimately concerned with a positive alternative to an Orwellian 1984 offers an entertaining series of historical accounts taken from the nineteenth century to highlight a main theme the nature of technological change the fission brought about in society by such change and society's reaction to that change Beginning with a remarkable illustration of resistance to innovation in the U S Navy following an officer's discovery of a more accurate way to fire a gun at sea Elting Morison goes on to narrate the strange history of the new model steamship the Wapanoag in the 1860s He then continues with the difficulties confronting the introduction of the pasteurization process for milk he traces the development of the Bessemer process and finally he considers the computer While the discussions are liberally sprinkled with amusing examples and anecdotes all are related to the more profound and current problem of how to organize and manage system of ideas energies and machinery so that it will conform to the human dimension

Men, Machines, and War Ronald Haycock, Keith Neilson, 2006-01-01 Using examples from the last two centuries this collection of essays discusses the close links between technology and war In the opening essay distinguished historian William H McNeill demonstrates the extent to which military technology has often led to differentiations among people both within and between societies The other studies examine various aspects of weapons technology drawing on the history of the armed forces of Britain Prussia and Australia among others Some of these illustrate how the adoption of new weaponry frequently depended as much on national pride and party politics as it did on the purely technical merits of the weapons involved that financial considerations became increasingly primary in technological developments in British army after World War I and that decisions made prior to 1939 about the aviation technology to be developed for military purposes largely determined what kind of the RAF was able to fight The chapter by Dr G R Lindsay the Chief of the Operational Research and Analysis Establishment at the Department of National Defence Headquarters in Ottawa makes the case that with nuclear weapons added to the scene the impact of technology on international security has never been as great as at present and that the competition of nations seeking the technological edge in weaponry threatens to destabilize the precarious balance that has existed since 1945

Men, Machines, and Modern Times, 50th Anniversary Edition Elting E. Morison, 2016-08-26 An engaging look at how we have learned to live with innovation and new technologies through history People have had trouble adapting to new technology ever since perhaps the inventor of the wheel had to explain that a wheelbarrow could carry more than a person This little book by a celebrated MIT professor the fiftieth anniversary edition of a classic describes how we learn to live and work with innovation Elting Morison considers among other things the three stages of users resistance to change ignoring it rational rebuttal and name calling He recounts the illustrative anecdote of the World War II artillerymen who stood still to hold the horses despite the fact that the guns were now hitched to trucks reassuring those of us who have trouble with a new interface or a software upgrade that we are

not the first to encounter such problems Morison offers an entertaining series of historical accounts to highlight his major theme the nature of technological change and society's reaction to that change He begins with resistance to innovation in the U S Navy following an officer's discovery of a more accurate way to fire a gun at sea continues with thoughts about bureaucracy paperwork and card files touches on rumble seats the ghost in Hamlet and computers tells the strange history of a new model steamship in the 1860s and describes the development of the Bessemer steel process Each instance teaches a lesson about the more profound and current problem of how to organize and manage systems of ideas energies and machinery so that it will conform to the human dimension
