The Retina A Model for Cell Biology Studies Part_1 Ruben Adler,2012-12-02 The Retina A Model for Cell Biology Studies Part I is the first of a two part series that details developments in the study of retinal cell biology The book begins with some basic information about retinal structure and development followed by a discussion of the advantages of the retina as a model system for cell biology studies It reviews some of the major events in the maturation of the retina pertinent to the assembly of neuronal circuits The book describes studies of neuronal assembly in order to demonstrate that adhesion based neuronal assembly may be the most elaborated example of a wider class of morphogenetic phenomena categorized as adhesion guided multicellular assembly systems The remaining chapters discuss in vivo and in vitro studies on trophic interactions in retinal development and in retinal degenerations cell motility in the retina molecular properties of vertebrate rod cells the role of cyclic nucleotides in the metabolism and function of the retina and the cellular and molecular aspects of photosensitive membrane turnover

The Retina A Model for Cell Biology Studies Part_2 Ruben Adler,2012-12-02 The Retina A Model for Cell Biology Studies Part II is the second of a two part series that details developments in the study of retinal cell biology The book begins with a review of the current evidence for the role of putative neurotransmitters at particular synapses in the retina It then discusses pre and postsynaptic regulatory mechanisms the interactions of neurotransmitter neuromodulatory systems and cellular effects of putative neurotransmitters and neuromodulators This is followed by an introduction to vision psychophysics showing its application in studying the functioning of cells in the retina The remaining chapters discuss how the retinal pigment epithelium cell might be used as a model for studying biological problems of current interest extracellular matrix molecules concepts and controversies regarding the biology of endothelial cells the key elements in the phenomenon of intraocular neovascularization the use of genetic mutations and genetic mosaics for the study of the retina and the retina as a regenerating organ

Principles and Practice of Clinical Electrophysiology of Vision, second edition John R. Heckenlively,Geoffrey B. Arden,2006-04-07 The long awaited second edition of an authoritative reference on electrophysiologic vision testing including detailed information on techniques and problems basic physiology and anatomy theoretical concepts and clinical findings with extensive new material This authoritative text is the only comprehensive reference available on electrophysiologic vision testing offering both practical information on techniques and problems as well as basic physiology and anatomy theoretical concepts and clinical correlations The second edition of the widely used text offers extensive new material and updated information 65 of the 84 chapters are completely new with the changes reflecting recent advances in the field The book will continue to be an essential resource for practitioners and scholars from a range of disciplines within vision science The contributions not only cover new information important material that is likely to become more important in the next decade but also offer a long range perspective on the field and its remarkable development in the last century After discussing the history and background of clinical electrophysiology the

book introduces the anatomy of the retina and principles of cell biology in the visual pathways at the molecular physiological and biochemical levels It relates these new findings to the techniques and interpretations of clinical tests including the electro oculogram EOG electroretinogram ERG and visual evoked potentials VEP which are discussed in detail as are equipment data acquisition and analysis principles and protocols for clinical testing diseases and dysfunction and animal testing Notable additions for this edition include chapters on the origin of electroretinogram waveforms multifocal techniques testing in standard laboratory animals recent advances in analysis of abnormalities in disease and the applications of these techniques to the study of genetic abnormalities
