Pitman Research Notes In Mathematics Pseudo Orbits Of Contact Forms:

Pseudo-orbits of Contact Forms A. Bahri, 1988 This paper is centered on a variational problem lacking compactness on a submanifold of the loop space of a three dimensional compact and orientable manifold M The objects studied are M^α and v where α is a contact form on M ξ its Reeb vector field v a non singular vector field in the kernel of α These geometrical objects are ends of flow lines of a kind of pseudo gradient for the functional which when parametrized suitably explain why the Palais Smale condition fails There are stable and unstable manifolds for the flow related to these critical points at infinity as well as Morse index They are reached through a singular perturbation technique involving the full pendulum equation with coefficients equal to functions on the manifold M the full study of the convergence problem is completed in this paper and the main characteristics of this variational problem are singled out including the way they change depending on v

Flow Lines and Algebraic Invariants in Contact Form Geometry Abbas Bahri, 2012-12-06 This text features a careful treatment of flow lines and algebraic invariants in contact form geometry a vast area of research connected to symplectic field theory pseudo holomorphic curves and Gromov Witten invariants contact homology In particular this work develops a novel algebraic tool in this field rooted in the concept of critical points at infinity the new algebraic invariants defined here are useful in the investigation of contact structures and Reeb vector fields The book opens with a review of prior results and then proceeds through an examination of variational problems non Fredholm behavior true and false critical points at infinity and topological implications An increasing convergence with regular and singular Yamabe type problems is discussed and the intersection between contact form and Riemannian geometry is emphasized with a specific focus on a unified approach to non compactness in both disciplines Fully detailed explicit proofs and a number of suggestions for further research are provided throughout Rich in open problems and written with a global view of several branches of mathematics this text lays the foundation for new avenues of study in contact form geometry Graduate students and researchers in geometry partial differential equations and related fields will benefit from the book's breadth and unique perspective

Partial Differential Equations arising from Physics and Geometry Mohamed Ben

Ayed, Mohamed Ali Jendoubi, Yomna Rébai, Hasna Riahi, Hatem Zaag, 2019-05-02 Presents the state of the art in PDEs including the latest research and short courses accessible to graduate students **Perspectives in Nonlinear Partial Differential Equations** Henri Berestycki, 2007 In celebration of Haim Brezis's 60th birthday a conference was held at the Ecole Polytechnique in Paris with a program testifying to Brezis's wide ranging influence on nonlinear analysis and partial differential equations The articles in this volume are primarily from that conference They present a rare view of the state of the art of many aspects of nonlinear PDEs as well as describe new directions that are being opened up in this field The articles written by mathematicians at the center of current developments provide somewhat more personal views of the important developments and challenges **Nonlinear Variational Problems and Partial Differential Equations** A Marino, M K V Murthy, 1995-02-27 Contains proceedings of a conference held in Italy in late 1990 dedicated to discussing problems and recent progress in different aspects of nonlinear analysis such as critical point theory global analysis nonlinear evolution equations hyperbolic problems conservation laws fluid mechanics gamma convergence homogenization and relaxation methods Hamilton Jacobi equations and nonlinear elliptic and parabolic systems Also discussed are applications to some questions in differential geometry and nonlinear partial differential equations *Classical and Quantic Periodic Motions of Multiply Polarized Spin-Particles* Abbas Bahri, 1997-11-28 The author of this volume defines a diffusion flow for a variational problem lacking completeness related to the geometry of a contact form α and a vector field u in its kernel He analyzes the ends of the flow lines and finds them to be of two types one involving periodic orbits of the Reeb Hamiltonian vector field x and the other where asymptotes occur In the most general case these turn out to be periodic motions for x up to quantic jumps of a very special type along u He shows that the mathematical results and the physical interpretation fit and provide new points of view useful in the foundations of quantum mechanics **Recent Progress in Conformal Geometry** Abbas Bahri, Yongzhong Xu, 2007 This book presents a new front of research in conformal geometry on sign changing Yamabe type problems and contact form geometry in particular New ground is broken with the establishment of a Morse lemma at infinity for sign changing Yamabe type problems This family of problems thought to be out of reach a few years ago becomes a family of problems which can be studied the book lays the foundation for a program of research in this direction In contact form geometry a cousin of symplectic geometry the authors prove a fundamental result of compactness in a variational problem on Legendrian curves which allows one to define a homology associated to a contact structure and a vector field of its kernel on a three dimensional manifold The homology is invariant under deformation of the contact form and can be read on a sub Morse complex of the Morse complex of the variational problem built with the periodic orbits of the Reeb vector field This book introduces therefore a practical tool in the field and this homology becomes computable **Human-Like Biomechanics** Vladimir G. Ivancevic, Tijana T. Ivancevic, 2008-01-11 Human Like Biomechanics is a comprehensive introduction into modern geometrical methods to be used as a unified research approach in two apparently separate and

rapidly growing fields mathematical biomechanics and humanoid robotics The book contains six Chapters and an Appendix The first Chapter is an Introduction giving a brief review of mathematical techniques to be used in the text The second Chapter develops geometrical basis of human like biomechanics while the third Chapter develops its mechanical basis mainly from generalized Lagrangian and Hamiltonian perspective The fourth Chapter develops topology of human like biomechanics while the fifth Chapter reviews related nonlinear control techniques The sixth Chapter develops covariant biophysics of electro muscular stimulation The Appendix consists of two parts classical muscular mechanics and modern path integral methods which are both used frequently in the main text The whole book is based on the authors own research papers in human like biomechanics
