# Random Projection Method

**Hamido Fujita, Guido Guizzi**

## **Random Projection Method:**

The Random Projection Method Santosh S. Vempala, **The Random Projection Method** Santosh Srinivas Vempala, 2004 Random projection is a simple geometric technique for reducing the dimensionality of a set of points in Euclidean space while preserving pairwise distances approximately The technique plays a key role in several breakthrough developments in the field of algorithms In other cases it provides elegant alternative proofs The book begins with an elementary description of the technique and its basic properties Then it develops the method in the context of applications which are divided into three groups The first group consists of combinatorial optimization problems such as maxcut graph coloring

**Pattern Recognition Applications and Methods** Maria De Marsico, Gabriella Sanniti di Baja, Ana Fred, 2018-06-15 This book contains revised and extended versions of selected papers from the 6th International Conference on Pattern Recognition ICPRAM 2017 held in Porto Portugal in February 2017 The 13 full papers presented were carefully reviewed and selected from 139 initial submissions They aim at making visible and understandable the relevant trends of current research on pattern recognition

Entropy Randomization in Machine Learning Yuri S. Popkov, Alexey Yu. Popkov, Yuri A. Dubnov, 2022-08-09 Entropy Randomization in Machine Learning presents a new approach to machine learning entropy randomization to obtain optimal solutions under uncertainty uncertain data and models of the objects under study Randomized machine learning procedures involve models with random parameters and maximum entropy estimates of the probability density functions of the model parameters under balance conditions with measured data Optimality conditions are derived in the form of nonlinear equations with integral components A new numerical random search method is developed for solving these equations in a probabilistic sense Along with the theoretical foundations of randomized machine learning Entropy Randomization in Machine Learning considers several applications to binary classification modelling the dynamics of the Earth's population predicting seasonal electric load fluctuations of power supply systems and forecasting the thermokarst lakes area in Western Siberia Features A systematic presentation of the randomized machine learning problem from data processing through structuring randomized models and algorithmic procedure to the solution of applications relevant problems in different fields Provides new numerical methods for random global optimization and computation of multidimensional integrals A universal algorithm for randomized machine learning This book will appeal to undergraduates and postgraduates specializing in artificial intelligence and machine learning researchers and engineers involved in the development of applied machine learning systems and researchers of forecasting problems in various fields

**Hyperbolic Problems: Theory, Numerics, Applications** Heinrich Freistühler, Gerald Warnecke, 2013-12-01 The Eighth International Conference on Hyperbolic Problems Theory Numerics Applications was held in Magdeburg Germany from February 27 to March 3 2000 It was attended by over 220 participants from many European countries as well as Brazil Canada China Georgia India Israel Japan Taiwan und the USA There were 12 plenary lectures 22 further invited talks and around 150 contributed talks in parallel sessions as well as posters The speakers in the parallel sessions were invited to provide a poster in order to enhance the dissemination of information Hyperbolic partial differential equations describe phenomena of material or wave transport in physics biology and engineering especially in the field of fluid mechanics Despite considerable progress the mathematical theory is still struggling with fundamental open problems concerning systems of such equations in multiple space dimensions For various applications the development of accurate and efficient numerical schemes for computation is of fundamental importance Applications touched in these proceedings concern one phase and multiphase fluid flow phase transitions shallow water dynamics elasticity extended thermodynamics electromagnetism classical and relativistic magnetohydrodynamics cosmology Contributions to the abstract theory of hyperbolic systems deal with viscous and relaxation approximations front tracking and wellposedness stability of shock profiles and multi shock patterns traveling fronts for transport equations Numerically oriented articles study finite difference finite volume and finite element schemes adaptive multiresolution and artificial dissipation methods

**Advances in Intelligent Networking and Collaborative Systems** Leonard Barolli, Kin Fun Li, Hiroyoshi Miwa, 2020-08-20 This book aims to provide the latest research findings innovative research results methods and development techniques from both theoretical and practical perspectives related to intelligent social networks and collaborative systems intelligent networking systems mobile collaborative systems secure intelligent cloud systems etc as well as to reveal synergies among various paradigms in such a multi disciplinary field intelligent collaborative systems With the fast development of the Internet we are experiencing a shift from the traditional sharing of information and applications as the main purpose of the Web to an emergent paradigm which locates people at the very centre of networks and exploits the value of people's connections relations and collaboration Social networks are also playing a major role in the dynamics and structure of intelligent Web based networking and collaborative systems Virtual campuses virtual communities and organizations strongly leverage intelligent networking and collaborative systems by a great variety of formal and informal electronic relations such as business to business peer to peer and many types of online collaborative learning interactions including the emerging e learning systems This has resulted in entangled systems that

need to be managed efficiently and in an autonomous way In addition latest and powerful technologies based on grid and wireless infrastructure as well as cloud computing are currently enhancing collaborative and networking applications as a great deal but also facing new issues and challenges The principal purpose of the research and development community is to stimulate research that will lead to the creation of responsive environments for networking and at longer term the development of adaptive secure mobile and intuitive intelligent systems for collaborative work and learning

Experimental Study of Random Projections Below the JL Limit Xiuyi Ye (Software engineer),2015 Random projection is a method used to reduce dimensionality of desired objects with pair wise distances preserved at a relatively high probability The mathematical theory behind this is called the Johnson Lindenstrauss JL lemma So the basic idea of the JL lemma is that a set of points in a high dimensional space  $p$  are randomly projected down to a lower dimensional space  $q$  This  $q$  can be as low as  $q_0$  to still make sure that with a certain probability the projected pair wise distances are within plus minus epsilon of the pairwise distances before the projection where plus or minus epsilon is usually a very small value This technique has already been used in a variety of areas like clustering image and text data processing Lots of researchers have already studied the properties and performance of the JL lemma above  $q_0$   $q$  is usually called the JL limit or JL bound where  $q \geq p \geq 2 \cdot q_0$  but no research has investigated using the JL lemma below the JL limit  $q < q_0$   $q \geq 2 \cdot q_0$  With much lower dimension the data processing storing almost everything is going to be so much easier We can visualize the clustering information about data sets in 2D plots One thing should not be forgotten is that the distance preservation is probabilistic How well will the distances being preserved below the JL bound Will it affect or even completely destroy the cluster structure after the projection What is a good projection method We are going to study and answer these questions as much as we can in this thesis
