Padgett,2013-03-14 As statisticians we are constantly trying to make inferences about the underlying population from which data are observed This includes estimation and prediction about the underlying population parameters from both complete and incomplete data Recently methodology for estimation and prediction from incomplete data has been found useful for what is known as record breaking data that is data generated from setting new records There has long been a keen interest in observing all kinds of records in particular sports records financial records flood records and daily temperature records to mention a few The well known Guinness Book of World Records is full of this kind of record information As usual beyond the general interest in knowing the last or current record value the statistical problem of prediction of the next record based on past records has also been an important area of record research Probabilistic and statistical models to describe behavior and make predictions from record breaking data have been developed only within the last fifty or so years with a relatively large amount of literature appearing on the subject in the last couple of decades This book written from a statistician s perspective is not a compilation of records rather it deals with the statistical issues of inference from a type of incomplete data record breaking data observed as successive record values maxima or minima arising from a phenomenon or situation under study Prediction is just one aspect of statistical inference based on observed record values     **Forthcoming Books** Rose Arny,1996-06     **Randomization Tests** R. the appropriate size for a study discusses statistical modeling in epidemiology covers methods for comparing and summarizing the evidence from several studies and explains how to use statistical models in risk forecasting and assessing new biomarkers The author illustrates the techniques with numerous real world examples and interprets results in a practical way He also includes an extensive list of references for further reading along with exercises to reinforce understanding Web Resource A wealth of supporting material can be downloaded from the book s CRC Press web page including Real life data sets used in the text SAS and Stata programs used for examples in the text SAS and Stata programs for special techniques covered Sample size spreadsheet **International Mathematical News** ,1985
