The Writer's Index of Good Form and Good English John Matthews Manly, Edith Rickert, 1923

The St. Petersburg School of Number Theory Boris Nikolaevich Delone, 2005 The book acquaints the reader with the most important works of these six eminent members of the St Petersburg school A short biography is given for each of them followed by an exposition of some of his most significant contributions Each contribution is presented as a summary of the author's original work and is followed by commentary Certain works receive relatively complete expositions while others are dealt with more briefly With a Foreword written for the English edition this volume will appeal to a broad mathematical audience including mathematical historians and mathematicians working in number theory Jacket

Aspectual Grammar and Past-time Reference Laura A. Michaelis, 1998 This study presents a semantic framework for analysing all aspectual constructions in terms of the event state distinction and describes the grammatical expression of aspectual meaning in terms of a theory of grammatical constructions In this theory grammatical constructions like words are conventionalized form meaning pairs which are best described not only with respect to their intrinsic semantic values but also with respect to the functional oppositions in which they participate

An Invitation to Computational Homotopy Graham Ellis, 2019 An Invitation to Computational Homotopy is an introduction to elementary algebraic topology for those with an interest in computers and computer programming It expertly illustrates how the basics of the subject can be implemented on a computer through its focus on fully worked examples designed to develop problem solving techniques The transition from basic theory to practical computation raises a range of non trivial algorithmic issues which will appeal to readers already familiar with basic theory and who are interested in developing computational aspects The book covers a subset of standard introductory material on fundamental groups covering spaces homology cohomology and classifying spaces as well as some less standard material on crossed modules These topics are covered in a way that hints at potential applications of topology in areas of computer science and engineering outside the usual territory of pure mathematics and also in a way that demonstrates how computers can be used to perform explicit calculations within the domain of pure algebraic topology itself The initial chapters include in depth examples from data mining biology and digital image analysis while the later chapters cover a range of computational examples on the cohomology of classifying spaces that are likely beyond the reach of a purely paper and pen approach to the subject An Invitation to Computational Homotopy serves as a self contained and informal introduction to these topics and their implementation in the sphere of computer science Written in a dynamic and engaging style it skilfully showcases a range of useful machine computations and will serve as an invaluable aid to graduate students working with algebraic topology
