Prot G:

A Protocol-theoretic Framework for the Logic of Epistemic Norms Ralph Jenkins, 2022-09-26 This book defines a logical system called the Protocol theoretic Logic of Epistemic Norms PLEN it develops PLEN into a formal framework for representing and reasoning about epistemic norms and it shows that PLEN is theoretically interesting and useful with regard to the aims of such a framework In order to motivate the project the author defends an account of epistemic norms called epistemic proceduralism The core of this view is the idea that in virtue of their indispensable regulative role in cognitive life epistemic norms are closely intertwined with procedural rules that restrict epistemic actions procedures and processes The resulting organizing principle of the book is that epistemic norms are protocols for epistemic planning and control The core of the book is developing PLEN which is essentially a novel variant of propositional dynamic logic PDL distinguished by more or less elaborate revisions of PDL s syntax and semantics The syntax encodes the procedural content of epistemic norms by means of the well known protocol or program constructions of dynamic and epistemic logics It then provides a novel language of operators on protocols including a range of unique protocol equivalence relations syntactic operations on protocols and various procedural relations among protocols in addition to the standard dynamic modal operators of PDL The semantics of the system then interprets protocol expressions and expressions embedding protocols over a class of directed multigraph like structures rather than the standard labeled transition systems or modal frames The intent of the system is to better represent epistemic dynamics build a logic of protocols atop it and then show that the resulting logic of protocols is useful as a logical framework for epistemic norms The resulting theory of epistemic norms centers on notions of norm equivalence derived from theories of process equivalence familiar from the study of dynamic and modal logics The canonical account of protocol equivalence in PLEN turns out to possess a number of interesting formal features including satisfaction of important conditions on hyperintensional equivalence a matter of recently recognized importance in the logic of norms generally To show that the system is interesting and useful as a framework for representing and reasoning about epistemic norms the author applies the logical system to the analysis of epistemic deontic operators and partly on the basis of this establishes representation theorems linking protocols to the action guiding content of epistemic norms The protocol theoretic logic of epistemic norms is then shown to almost immediately validate the main principles of epistemic proceduralism

Perinatal Physiology Uwe Stave, 2013-06-29 Living Nature not dull Art Shall plan my ways and rule my heart Cardinal Newman Nature and Art 1868 One of the ineluctable consequences of growth in any field of science is that subjects of inquiry once established tend to give birth to subsubjects and that the subsubjects once established will in time undergo further mitotic division Not so many years ago problems surrounding the ietus and newly born infant lay in a realm almost to be described as a no man s land Obstetricians properly gave major consideration to understanding and learning about processes and disorders concerned with maternal health and safety The welfare of the infant was regarded as of secondary

importance Pediatricians on their part hesitated to invade the nursery a sanctum regarded as belonging to the domain of the accoucheur And the pathologist enveloped in the mysteries of life and death in the adult found scant time for the neonate and the placenta

Algebraic Foundations of Non-Commutative Differential Geometry and Quantum Groups Ludwig Pittner,2009-01-29 Quantum groups and quantum algebras as well as non commutative differential geometry are important in mathematics and considered to be useful tools for model building in statistical and quantum physics This book addressing scientists and postgraduates contains a detailed and rather complete presentation of the algebraic framework Introductory chapters deal with background material such as Lie and Hopf superalgebras Lie super bialgebras or formal power series Great care was taken to present a reliable collection of formulae and to unify the notation making this volume a useful work of reference for mathematicians and mathematical physicists
