Performance Reality:

Theatre of the Real C. Martin, 2012-10-23 This book proposes a new way to consider theatre and performance that claims a special relationship to reality truth and authenticity It documents innovations in devising and staging theatre and performance that takes reality as its subject cultural shifts that have generated theatre of the real some of its problems and some possibilities

Playing Real Lindsay Brandon Hunter, 2021-02-15 *Playing Real Mimesis Media and Mischief* explores the integration and interaction of mimetic theatricality and representational media in twentieth and twenty first century performance It brings together carefully chosen sites of performance including live broadcasts of theatrical productions reality television and alternate reality gaming in which mediatization and mimesis compete and collude to represent the real to audiences Lindsay Brandon Hunter reads such performances as forcing confrontation between notions of authenticity sincerity and spontaneity and their various others the fake the feigned the staged or the rehearsed Each site examined in *Playing Real* purports to show audiences something real real theater real housewives real alternative scenarios which is simultaneously visible as overtly constructed adulterated by artifice and artificiality The integration of mediatization and theatricality in these performances Hunter argues exploits the proclivities of both to conjure the real even as they risk corrupting the perception of authenticity by imbricating it with artifice and overt manipulation Although the performances analyzed obscure boundaries separating actual from virtual genuine from artificial and truth from fiction Hunter rejects the notion that these productions imperil the real She insists on uncertainty as a fertile site for productive and pleasurable mischief including relationships to realness and authenticity among both audience and participants

Real Time Detection of Turning Points in Financial Time Series Ueli Hartmann,Felipe Ramirez,2013-03-22 Research Paper undergraduate from the year 2012 in the subject Mathematics Applied Mathematics grade 5 5 ZHAW Z rcher Hochschule f r Angewandte Wissenschaften language English abstract As a consequence of the recent financial crisis institutions are increasingly interested in identifying turning points in financial time series The accurate and early identification of these turning points can result in the optimal exploitation of the invested capital and profit maximization Most existing methods for the real time identification of turning points have proved unreliable and therefore the need to develop a cutting edge model The DFA methodology of Prof Dr Marc Wildi is one promising real time procedure that seeks to solve this problem The purpose of this thesis is the evaluation and comparison of different variants of the DFA procedure in order to find a method for the effective identification of turning points in important financial time series such as the S P 500 and the EUROSTOXX 50 and their implied volatility indices VIX and VSTOXX resp Further this thesis aims to develop a suitable investment strategy based on the obtained results For the purpose of this thesis the time series mentioned above were analyzed between the years 1990 and 2011 using the last year as out of sample data

Frequency analysis using Fourier transforms as well as different variants of the DFA algorithm were applied in order to identify the desired turning points The results obtained from these analyses of the S P 500 and EUROSTOXX 50 time series show a considerable out of sample investment return which verifies the validity of the model On a second level of analysis using the implied volatility indices it was possible to generalize the model and thereby verify the initial results Moreover with the help of the development of further investment strategies it was possible to normalize profit returns maintaining a semi constant growth which is usually preferred by financial institutions Finally given the structural similarities of the two main financial series examined whose clear profile was only observable using the DFA system it was possible to combine both time series using the daily exchange rate as a cyclical and structural catalyst thus achieving a deeper thrust of the model This all was possible by highlighting the flexibility of the DFA model for real time analysis of financial time series and its practical application as a tool for investment analysis Therefore the DFA Modell enables an accurate real time identification of tuning points in financial series
