## Microscopic To Macroscopic:

**Virtual Crowds** Nuria Pelechano, Jan M. Allbeck, Norman I. Badler, 2008 There are many applications of computer animation and simulation where it is necessary to model virtual crowds of autonomous agents Some of these applications include site planning education entertainment training and human factors analysis for building evacuation Other applications include simulations of scenarios where masses of people gather flow and disperse such as transportation centers sporting events and concerts Most crowd simulations include only basic locomotive behaviors possibly coupled with a few stochastic actions Our goal in this survey is to establish a baseline of techniques and requirements for simulating large scale virtual human populations Sometimes these populations might be mutually engaged in a common activity such as evacuation from a building or area other times they may be going about their individual and personal agenda of work play leisure travel or spectator Computational methods to model one set of requirements may not mesh well with good approaches to another By including both crowd and individual goals and constraints into a comprehensive computational model we expect to simulate the visual texture and contextual behaviors of groups of seemingly sentient beings

*Low-Temperature Plasma for Biomedical Applications* Mounir Laroussi, Michael Keidar, Vladimir I. Kolobov, 2023-11-09 Low temperature plasmas LTP at atmospheric gas pressure play an increasing role in biomedical applications The experimentally observed benefits of LTP for these applications are attributed to the controllable fluxes of chemically active species that can be produced in air at near room temperatures and delivered to bio matter to induce desired effects Recent research on the biomedical applications of LTP has generated new scientific knowledge regarding the interaction of plasma with soft matter including cells tissues seeds and plants The observed effects of LTP on biological cells are mediated by the plasma produced reactive oxygen species ROS and reactive nitrogen species RNS These include hydroxyl OH atomic oxygen O singlet delta oxygen O<sub>2</sub> 1 superoxide O<sub>2</sub> hydrogen peroxide H<sub>2</sub>O<sub>2</sub> and nitric oxide NO Some of these species are known to play important roles in biology serving as signaling molecules in living organisms When they come in contact with biological cells these species interact with the lipids

and proteins of the cell membrane enter the cell and increase the intracellular ROS concentrations which can lead to DNA damage and may compromise the integrity of other cell organelles ROS and RNS can also trigger cell signaling pathways which can lead to cellular death by apoptosis or necrosis Other plasma generated agents that could play biological roles are charged particles electrons and ions UV photons and electric fields

### **Information Processing in Biological Systems**

Stephan L. Mintz, Arnold Perlmutter, 2012-12-06 This volume contains the greater part of the papers submitted to the Information Processing in Biology portion of the 1983 Orbis Scientiae then dedicated to the eightieth year of Professor P A M Dirac Before the volume could be published Professor Dirac passed away on October 20 1984 thereby changing the dedication of this volume and its companion on High Energy Physics to his everlasting memory The last Orbis Scientiae as it was often in the past was shared by two frontier fields in this case by High Energy Physics and Information Processing in Biology demonstrating the universality of scientific principles and goals The interaction amongst scientists of diverse interests can only enhance the fruitfulness of their efforts The editors take pride in the modest contribution of Orbis Scientiae towards this goal It is a pleasure to acknowledge the typing of these proceedings by Regelio Rodriguez and Helga Billings and the customary excellent supervision by the latter The efficient preparation and organization of the conference was due largely to the skill and dedication of Linda Scott As in the past Orbis Scientiae 1983 received nominal support from the United States Department of Energy and the National Science Foundation

### *The Emergence of a Scientific Culture* Stephen

Gaukroger, 2008-10-23 Why did science emerge in the West and how did scientific values come to be regarded as the yardstick for all other forms of knowledge Stephen Gaukroger shows just how bitterly the cognitive and cultural standing of science was contested in its early development Rejecting the traditional picture of secularization he argues that science in the seventeenth century emerged not in opposition to religion but rather was in many respects driven by it Moreover science did not present a unified picture of nature but was an unstable field of different often locally successful but just as often incompatible programmes To complicate matters much depended on attempts to reshape the persona of the natural philosopher and distinctive new notions of objectivity and impartiality were imported into natural philosophy changing its character radically by redefining the qualities of its practitioners The West's sense of itself its relation to its past and its sense of its future have been profoundly altered since the seventeenth century as cognitive values generally have gradually come to be shaped around scientific ones Science has not merely brought a new set of such values to the task of understanding the world and our place in it but rather has completely transformed the task redefining the goals of enquiry This distinctive feature of the development of a scientific culture in the West marks it out from other scientifically productive cultures In *The Emergence of a Scientific Culture* Stephen Gaukroger offers a detailed and comprehensive account of the formative stages of this development and one which challenges the received wisdom that science was seen to be self evidently the correct path to knowledge and that the benefits of science were immediately obvious to the disinterested
