Techniques '99** Dani Lischinski,Greg W. Larson,2012-12-06 This book contains the proceedings of the 10th Eurographics  
Workshop on Rendering which took place from the 21st to the 23rd of June 1999 in Granada Spain Originally an outgrowth  
of the annual Eurographics meeting the workshop was organized by a dedicated group of researchers who felt there was  
insufficient opportunity at Eurographics and Siggraph to exchange ideas specifically on rendering Over the past 9 years the  
workshop has become renowned as an international watershed for top quality work in this field attracting between 50 and 100  
attendees each year to share their latest research This year we received a total of 63 submissions Each paper was carefully  
reviewed by two of the 25 international programme committee members as well as two external reviewers selected by the co  
chairs from a pool of 71 individuals The programme committee and external reviewers are listed following the contents pages  
In this new review process all submissions and reviews were handled electronically with the exception of videos submitted  
with a few of the papers This streamlined the review process considerably while reducing the costs and confusion associated  
with courier delivery of hundreds of papers     Index of Conference Proceedings British Library. Document Supply

Torsten Möller,Bernd Hamann,Robert D. Russell,2009-06-12 The goal of visualization is the accurate interactive and intuitive  
presentation of data Complex numerical simulations high resolution imaging devices and increasingly common environment  
embedded sensors are the primary generators of massive data sets Being able to derive scientific insight from data increasingly  
depends on having mathematical and perceptual models to provide the necessary foundation for effective data analysis and  
comprehension The peer reviewed state of the art research papers included in this book focus on continuous data models  
such as is common in medical imaging or computational modeling From the viewpoint of a visualization scientist we typically  
collaborate with an application scientist or engineer who needs to visually explore or study an object which is given by a set

of sample points which originally may or may not have been connected by a mesh. At some point one generally employs low order piecewise polynomial approximations of an object using one or several dependent functions. In order to have an understanding of a higher dimensional geometrical object or function efficient algorithms supporting real time analysis and manipulation (rotation, zooming) are needed. Often the data represents 3D or even time varying 3D phenomena such as medical data and the access to different layers, slices and structures, the underlying topology comprising such data is needed.
