Operation Moonglow Teasel Muir-Harmony,2020-11-24 The moon landing was an important moment in history but many forget what was happening behind the scenes discover the groundbreaking political history of the Apollo program in this riveting exploration of America's space missions Since July 1969 Neil Armstrong's first step on the Moon has represented the pinnacle of American space exploration and a grand scientific achievement Yet as Smithsonian curator Teasel Muir Harmony argues in Operation Moonglow its primary purpose wasn't advancing science Rather it was part of a political strategy to build a global coalition Starting with President John F Kennedy's 1961 decision to send astronauts to the Moon to promote American freedom over Soviet tyranny Project Apollo was central to American foreign relations From that perspective the critical event did not just take place on the lunar surface it took place in homes public squares palaces and schools around the world as Apollo captured global attention like never before After the Moon landing the Apollo astronauts and President Richard Nixon traveled the world to amplify the sense of participation and global unity shared by billions of people who followed the flight Drawing on a rich array of untapped archives and firsthand interviews with Apollo astronauts Operation Moonglow paints a riveting picture of the intersection of spaceflight geopolitics propaganda and diplomacy during the Cold War

**The Decision to Go to the Moon** John M. Logsdon, 1976 The decision announced by John F. Kennedy on May 25, 1961 initiating the expedition to the moon is now documented in full for future students of history To John Logsdon whose approach is that of a political scientist examining the influence of men and events on the decision making process the decision to land a man on the moon before this decade is out was wholly political rather than military although overtones of implied defense were useful in obtaining congressional support Moreover he notes it was made without the support of the scientific community although their previous research efforts were expected partially to offset this deterrent Although the success of the Russian manned orbit and the fiasco of the Bay of Pigs invasion certainly influenced the timing in the author's interpretation the Kennedy decision manages to escape the narrow definition of a public relations exhibition In Kennedy's view he emphasizes the security of the country itself was inseparably linked to a position of prestige in world opinion Nor was he a particular enthusiast of space exploration for its own rewards As he remarked to one of his advisors If you had a scientific spectacular on this earth that would be more useful say desalting the ocean or something just as dramatic and convincing as space then we would do that The thoroughness of this book as a historical record is evident throughout NASA historical records and government documents not previously released including several Presidential papers are used in the analysis and the author weaves these records together with subtleties of opinion from interviews with NASA officials and such Kennedy advisors as Theodore Sorenson, McGeorge Bundy, David Bell, and Jerome Wiesner

[Apollo and America's Moon Landing Program - Project Apollo World Spaceflight](#)

News, Roger D. Launius, National Aeronautics and Space Administration (NASA), 2018-01-05 This official NASA history document presents a narrative account of the Apollo lunar landing program from its origin through its assessment. The preface states: "The program to land an American on the Moon and return safely to Earth in the 1960s has been called by some observers a defining event of the twentieth century." Pulitzer Prize winning historian Arthur M. Schlesinger Jr. even suggested that when Americans two centuries hence study the twentieth century they will view the Apollo lunar landing as the critical event of the century. While that conclusion might be premature, there can be little doubt but that the flight of Apollo 11 in particular and the overall Apollo program in general was a high point in humanity's quest to explore the universe beyond Earth.

From the introduction: On 25 May 1961 President John F. Kennedy announced to the nation a goal of sending an American safely to the Moon before the end of the decade. This decision involved much study and review prior to making it public and tremendous expenditure and effort to make it a reality by 1969. Only the building of the Panama Canal rivaled the Apollo program's size as the largest non-military technological endeavor ever undertaken by the United States; only the Manhattan Project was comparable in a wartime setting. The human spaceflight imperative was a direct outgrowth of it. Projects Mercury, at least in its latter stages, Gemini, and Apollo were each designed to execute it. It was finally successfully accomplished on 20 July 1969 when Apollo 11's astronaut Neil Armstrong left the Lunar Module and set foot on the surface of the Moon.

Contents include: The Kennedy Perspective on Space, The Soviet Challenge Renewed, Reevaluating NASA's Priorities, The NASA Position Decision, An Assessment of the Decision, Gearing Up for Project Apollo, The Program Management Concept, How Do We Go to the Moon, Prelude to Apollo, Mercury, Bridging the Technological Gap, From Gemini to Apollo, Satellite Support of Apollo, Building Saturn, The Apollo Spacecraft, The Lunar Module, Trips to the Moon, A Meaning for Apollo.

*Manned Space Flight*, 1965      *Project Apollo* Robert Godwin, 2006 A history of the Apollo project featuring summaries of each of the seven lunar landing missions launched between 1969 and 1972 including the failed Apollo 13 and including spacecraft specifications and photographs      United States of America V. OCCI Company, 1984      **Project Apollo** David Jefferis, 2019 On July 23, 1969 Neil Armstrong and Edwin Buzz Aldrin stepped from their spacecraft onto the alien soil of the Moon, Earth's sister world. Using archival images and explanatory text, this riveting title guides the reader through NASA's Apollo space program, including the tragic deaths of an entire flight crew and Apollo's ultimate triumph: the first lunar landing in 1969. Maps of the Moon show where Apollo 11's lunar lander Eagle landed and the route taken by the Soviet robot lander Lunokhod 1 in 1970.
