Markov Fields Over Countable Partially Ordered Sets Extrema And Splitting:

Markov Fields over Countable Partially Ordered Sets: Extrema and Splitting I. V. Evstigneev, P. E.

Greenwood, 1994 Various notions of the Markov property relative to a partial ordering have been proposed by both physicists and mathematicians This work develops techniques for styling Markov fields on partially ordered sets We introduce random transformations of the index set which preserves the Markov property of the field These transformations yield new classes of Markov fields starting from relatively simple ones Examples include a model for crack formation and a model for the distribution of fibres in a composite material *Markov Fields Over Countable Partially Ordered Sets* Igor'

Viacheslavovich Evstigneev, Priscilla E. Greenwood, 1992

Second-Order Sturm-Liouville Difference Equations and Orthogonal Polynomials Alouf Jirari, 1995 This memoir presents machinery for analyzing many discrete physical situations and should be of interest to physicists engineers and mathematicians We develop a theory for regular and singular Sturm Liouville boundary value problems for difference equations generalizing many of the known results for differential equations We discuss the self adjointness of these problems as well as their abstract spectral resolution in the appropriate *italic capital* L^2 setting and give necessary and sufficient conditions for a second order difference operator to be self adjoint and have orthogonal polynomials as eigenfunctions **Orders of a Quartic Field** Jin Nakagawa, 1996 In this book the author studies the Dirichlet series whose coefficients are the number of orders of a quartic field with given indices Nakagawa gives an explicit expression of the Dirichlet series Using this expression its analytic properties are deduced He also presents an asymptotic formula for the number of orders in a quartic field with index less than a given positive number

On the Martingale Problem for Interactive Measure-Valued Branching Diffusions Edwin Arend Perkins, 1995 This book develops stochastic integration with respect to Brownian trees and its associated stochastic calculus with the aim of proving pathwise existence and uniqueness in a stochastic equation driven by a historical Brownian motion Perkins uses these results and a Girsanov type theorem to prove that the martingale problem for the historical process associated with a wide class of interactive branching measure valued diffusions superprocesses is well posed The resulting measure valued processes will arise as limits of the empirical measures of branching particle systems in which particles interact through their spatial motions or to a lesser extent through their branching rates **Automorphisms of the Lattice of Recursively**

Enumerable Sets Peter Cholak, 1995 A version of Harrington's *italic capital* Greek Δ^3 automorphism technique for the lattice of recursively enumerable sets is introduced and developed by reproving Soare's Extension Theorem Then this automorphism technique is used to show two technical theorems the High Extension Theorem I and the High Extension Theorem II This is a degree theoretic technique for constructing both automorphisms of the lattice of *re* sets and isomorphisms between various substructures of the lattice *Analytic Deformations of the Spectrum of a Family of Dirac Operators on an Odd-Dimensional*

Manifold with Boundary Paul Kirk, Eric Klassen, 1996 The analytic perturbation theory for eigenvalues of Dirac operators on

odd dimensional manifolds with boundary is described in terms of italic extended L2 eigenvectors end italics on manifolds with cylindrical ends These are generalizations of the Atiyah Patodi Singer extended italic capital L2 kernel of a Dirac operator We prove that they form a discrete set near zero and deform analytically in contrast to italic capital L2 eigenvectors which can be absorbed into the continuous spectrum under deformations when the tangential operator is not invertible We show that the analytic deformation theory for extended italic capital L2 eigenvectors and Atiyah Patodi Singer eigenvectors coincides

Global Aspects of Homoclinic Bifurcations of Vector Fields Ale Jan Homburg,1996 In this book the author investigates a class of smooth one parameter families of vector fields on some n dimensional manifold exhibiting a homoclinic bifurcation That is he considers generic families x_μ where x_0 has a distinguished hyperbolic singularity p and a homoclinic orbit an orbit converging to p both for positive and negative time It is assumed that this homoclinic orbit is of saddle saddle type characterized by the existence of well defined directions along which it converges to the singularity p The study is not confined to a small neighborhood of the homoclinic orbit Instead the position of the stable and unstable set of the homoclinic orbit is incorporated and it is shown that homoclinic bifurcations can lead to complicated bifurcations and dynamics including phenomena like intermittency and annihilation of suspended horseshoes

The Economy As An Evolving Complex System II W. Brian Arthur,Steven N Durlauf,David Lane,2018-05-04 A new view of the economy as an evolving complex system has been pioneered at the Santa Fe Institute over the last ten years This volume is a collection of articles that shape and define this view a view of the economy as emerging from the interactions of individual agents whose behavior constantly evolves whose strategies and actions are always adapting The traditional framework in economics portrays activity within an equilibrium steady state The interacting agents in the economy are typically homogenous solve well defined problems using perfect rationality and act within given legal and social structures The complexity approach by contrast sees economic activity as continually changing continually in process The interacting agents are typically heterogeneous they must cognitively interpret the problems they face and together they create the structures markets legal and social institutions price patters expectations to which they individually react Such structures may never settle down Agents may forever adapt and explore and evolve their behaviors within structures that continually emerge and change and disappear structures these behaviors co create This complexity approach does not replace the equilibrium one it complements it The papers here collected originated at a recent conference at the Santa Fe Institute which was called to follow up the well known 1987 SFI conference organized by Philip Anderson Kenneth Arrow and David Pines They survey the new study of complexity and the economy They apply this approach to real economic problems and they show the extent to which the initial vision of the 1987 conference has come to fruition
