Cause-Effect Structures Ludwik Czaja, 2019-05-27 This book presents a new algebraic system whose interpretation coincides with the behaviour of Petri nets enhanced with an inhibitory mechanism and four time models Its goal is to provide a formal means of modelling dynamic tasks and of testing and verifying properties in contexts characterised by the parallel execution of actions However the task description differs from that of Petri nets The algebra is a quasi semiring quasi because of its somewhat restricted distributivity axiom Expressions of this algebra the cause effect structures have a graphic presentation as nets but with one kind of named nodes each annotated by two expressions that specify the type of signal reception from predecessors and transmission to successors Many structural and behavioural properties are stated with proofs and illustrative sample tasks are included The book is intended for all those interested or involved in parallel and distributed computing students researchers and practitioners alike Mathematical Models for the Semantics of Parallelism

Marisa Venturini Zilli, 1987-10-07 The papers collected in this volume are most of the material presented at the Advanced School on Mathematical Models for the Semantics of Parallelism held in Rome September 24 October 1 1986 The need for a comprehensive and clear presentation of the several semantical approaches to parallelism motivated the stress on mathematical models by means of which comparisons among different approaches can also be performed in a perspicuous way **The Compiler Design Handbook** Y.N. Ilya Sergey, 2022-03-28 This open access book constitutes the proceedings of the 31st European Symposium on Programming ESOP 2022 which was held during April 5 7 2022 in Munich Germany as part of the European Joint Conferences on Theory and Practice of Software ETAPS 2022 The 21 regular papers presented in this volume were carefully reviewed and selected from 64 submissions They deal with fundamental issues in the specification design analysis and implementation of programming languages and systems Advances in Petri Nets 1991 Helmut Plünnecke, Wolfgang Reisig, 1991 The main idea behind the series of volumes *Advances in Petri Nets* is to present to the general computer science community recent results which are the most representative and significant for the development of the area The papers for the volumes are drawn mainly from the annual International Conferences on Applications and Theory of Petri Nets Selected papers from the latest conference are independently refereed and revised and extended as necessary Some further papers submitted directly to the editor are included *Advances in Petri Nets 1991* covers the 11th International Conference on Applications and Theory of Petri Nets held in Paris France in June 1991 The volume contains the Bibliography of Petri Nets 1990 prepared by H Plünnecke and W Reisig with over 4000 entries PUBLISHER S WEBSITE **Advances in Petri Nets 1987** Grzegorz

Rozenberg,1987-06-22 The aim of these series of volumes Advances in Petri Nets is to present to the general computer science community the most significant recent results with regard to the development in the area The main source of the papers are the annual European Workshops on Applications and Theory of Petri Nets the highest ranked papers from the past workshops are considered for the series i e they are again reviewed and accordingly revised or extended In addition to the workshop papers the Advances also present invited papers The present volume Advances in Petri Nets 1987 covers the 7th European Workshop on Applications and Theory of Petri Nets held in Oxford Great Britain in June 1986 It also contains a survey on complexity of problems related to Petri nets written by R R Howell and L E Rosier A special feature of this volume is a bibliography on Petri nets containing more than 2000 entries

Mathematical Foundations of Programming Language Semantics Michael Main,Austin Melton,Michael Mislove,David Schmidt,1988-03-09 This volume is the proceedings of the 3rd Workshop on the Mathematical Foundations of Programming Language Semantics held at Tulane University New Orleans Louisiana April 8 10 1987 The 1st Workshop was at Kansas State University Manhattan Kansas in April 1985 see LNCS 239 and the 2nd Workshop with a limited number of participants was at Kansas State in April 1986 It was the intention of the organizers that the 3rd Workshop survey as many areas of the Mathematical Foundations of Programming Language Semantics as reasonably possible The Workshop attracted 49 submitted papers from which 28 papers were chosen for presentation The papers ranged in subject from category theory and Lambda calculus to the structure theory of domains and power domains to implementation issues surrounding semantics

Semantics of Sequential and Parallel Programs Eike Best,1996 This book present formal semantics of sequential and parallel programs and emphasis formal relationships between different mathematical description techniques Providing a self contained introduction to all the necessary mathematics proofs are presented in a readable form which will appeal to the novice It contains an in depth study of the most well known and widely used methods for achieving correctness in program design and presents all technical results at an adequate and easy to learn level Case studies and exercises some of them with solutions help illustrate results

Conference proceedings Norman Meyrowitz,1988 **Report CS-R** ,1984 **Jerusalem Conference on Information Technology** ,1990 **An Evaluation Based Approach to Process Calculi** Joshua Robert Xavier Ross,1999 Abstract Process Calculi have starting with Milner s CCS traditionally been expressed by specifying the operational semantics in terms of action labelled transition relations between process expressions Normally this has been done using transitions that are inductively defined by rules following the structure of the process expressions This approach has been very successful but has suffered from certain problems One of these is that the construction of weak branching time congruences has not been as simple as one might wish In particular the natural weak bisimulations are not congruences typically shown up by the introduction of summation Secondly this method has not lent itself to the development of congruences for calculi that combine features of concurrency and higher order functional languages Another problem is

more aesthetic It is that in order to write these transition relations we need to use silent tau actions which are supposed to be unobservable However we need to represent them explicitly and make explicit reference to them in defining the congruence relations In this thesis an approach to process calculi based on evaluation to committed forms is presented In particular two process calculi are given The first is a first order CCS like calculus NCCS This demonstrates the possibility of giving natural weak branching time congruences with such features as summation without the use of explicit silent actions Various bisimulations are defined on NCCS and these are related to existing equivalences for CCS The second is a higher order calculus based on CML a higher order functional language extended with concurrent features Again it is shown that a natural weak branching time congruence exists In both cases a transition relation is also given and the relationship between evaluation and transition is shown Buletinul științific și tehnic al Institutului Politehnic "Traian Vuia" Timișoara ,1983

Advances in Petri Nets ,1993 *Logic Programming '86* Eiiti Wada,1987 **Advances in Petri Nets, 1986** Wilfried Brauer,Wolfgang Reisig,Grzegorz Rozenberg,1987 Petri Nets: Central Models and Their Properties Wilfried Brauer,Wolfgang Reisig,Grzegorz Rozenberg,1987-05-26 Petri Nets represent a long and sustained effort to develop concepts theories and tools to aid in design and analysis of concurrent systems They are used in many areas of computer science including software engineering data base and information systems computer architecture and operating systems communication protocols and computer networks process control and socio technical systems such as office communication and man machine interaction Quite substantial theory has been developed for Petri Nets It reflects all major problem areas of concurrent distributed systems and covers many successfully applied principles and analysis techniques for systems organisation Since the time that C A Petri has presented his original ideas a rich body of knowledge has been developed a recent bibliography in *Advances in Petri Nets* 1981 includes more than 2000 entries Already in 1979 an Advanced Course on Petri Nets was organized in Hamburg West Germany aiming at systematizing the existing knowledge and making it well accessible to a wide audience of computer scientists interested in theory and applications of concurrent systems This course has turned out to be successful in the sense that it has initiated a lot of new research into applications and theory of Petri Nets This had led to another Advanced Course in 1986 in Bad Honnef West Germany where during two weeks more than 30 lectures were presented covering the most important current developments in the area of Petri Nets **Analogical and Inductive Inference** Klaus P. Jantke,1987-07-15 This volume contains revised versions of presentations at the International Workshop on Analogical and Inductive Inference AII 86 held in Wendisch Rietz GDR October 16 10 1986 Inductive inference and analogical reasoning are two basic approaches to learning algorithms Both allow for exciting problems and promising concepts of invoking deeper mathematical results for considerable advances in intelligent software systems Hence analogical and inductive inference may be understood as a firm mathematical basis for a large variety of problems in artificial intelligence While the papers on inductive inference contain technical results and reflect the state of the art of this well

developed mathematical theory those devoted to analogical reasoning reflect the ongoing process of developing the basic concepts of the approach The workshop thus contributes significantly to the advancement of this field PARLE, Parallel Architectures and Languages Europe: Parallel languages Jacobus Willem Bakker, A. Embracing the Track of Appearance: An Mental Symphony within **Seminar On Concurrency Lecture Note In Computer Science Vol 197**

In some sort of eaten by monitors and the ceaseless chatter of fast communication, the melodic elegance and psychological symphony created by the prepared word usually disappear into the background, eclipsed by the relentless noise and interruptions that permeate our lives. However, set within the pages of **Seminar On Concurrency Lecture Note In Computer Science Vol 197** a charming literary treasure brimming with natural emotions, lies an immersive symphony waiting to be embraced. Constructed by a masterful composer of language, that captivating masterpiece conducts viewers on a psychological trip, well unraveling the concealed tunes and profound affect resonating within each carefully constructed phrase.
