guide aligns with foundational public health competencies required by increasingly rigorous certification and accreditation standards. Driven by the coronavirus pandemic and a looming climate crisis, the book addresses the rapid changes in modern day conceptions of disease prevention and health promotion. Today's public health practitioners and researchers are often called upon to address a complex web of factors including population inequities that influence health status from biology to social and structural determinants. Program and policy solutions to population health challenges require systematic planning, implementation, and evaluation. Providing students with knowledge, skills, and a range of tools, the book recognizes new approaches to communication and fresh methods for reaching a greater diversity of communities. The authors highlight the importance of starting the population health planning process with an inclusive assessment of the social needs and quality of life concerns of the community. They explain how to assess health problems systematically in epidemiological terms and address the behavioral and environmental determinants of the most important and changeable health problems. They also cover procedures for assessing and developing the capacity of communities and organizations to implement and evaluate programs. Drawing on more than 1,200 published applications of the PRECEDE-PROCEED model, *Health Program Planning, Implementation, and Evaluation* features numerous case studies and contributions from internationally recognized experts, including governmental, academic, and community public health leaders, giving readers a thorough and well-rounded view of the subject. Ultimately, it is an up-to-date powerhouse for community and global health promotion at all levels.
