Hogan,2015-09-04 When you write software you need to be at the top of your game Great programmers practice to keep their skills sharp Get sharp and stay sharp with more than fifty practice exercises rooted in real world scenarios If you re a new programmer these challenges will help you learn what you need to break into the field and if you re a seasoned pro you can use these exercises to learn that hot new language for your next gig One of the best ways to learn a programming language is to use it to solve problems That s what this book is all about Instead of questions rooted in theory this book presents problems you ll encounter in everyday software development These problems are designed for people learning their first programming language and they also provide a learning path for experienced developers to learn a new language quickly Start with simple input and output programs Do some currency conversion and figure out how many months it takes to pay off a credit card Calculate blood alcohol content and determine if it s safe to drive Replace words in files and filter records and use web services to display the weather store data and show how many people are in space right now At the end you ll tackle a few larger programs that will help you bring everything together Each problem includes constraints and challenges to push you further but it s up to you to come up with the solutions And next year when you want to learn a new programming language or style of programming perhaps OOP vs functional you can work through this book again using new approaches to solve familiar problems What You Need You need access to a computer a programming language reference and the programming language you want to use **Computerworld** ,1986-08-04 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide Computerworld s award winning Web site [Computerworld.com](https://www.computerworld.com) twice monthly publication focused conference
