Parallel Symbolic Computing: Languages, Systems, and Applications Robert H. Halstead, Takayasu Ito, 1993-11-03
Parallel and distributed computing are becoming increasingly important as cost effective ways to achieve high computational performance Symbolic computations are notable for their use of irregular data structures and hence parallel symbolic computing has its own distinctive set of technical challenges The papers in this book are based on presentations made at a workshop at MIT in October 1992 They present results in a wide range of areas including speculative computation scheduling techniques program development tools and environments programming languages and systems models of concurrency and distribution parallel computer architecture and symbolic applications *Compiler Construction* Reinhard Wilhelm, 2003-06-29 ETAPS 2001 was the fourth instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprised five conferences FOSSACS FASE ESOP CC TACAS ten satellite workshops CMCS ETI Day JOSES LDIA MMAABS PFM ReMiS UNIGRA WADT WTUML seven invited lectures a debate and ten tutorials The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools which support these activities are all well within its scope Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive *Compiler Compilers* Dieter Hammer, 1991-02-12 Advances and problems in the field of compiler compilers are considered in this volume which presents the proceedings of the third in a series of biannual workshops on compiler compilers Selected papers address the topics of requirements properties and theoretical aspects of compiler compilers as well as tools and metatools for software engineering The 23 papers cover a wide spectrum in the field of compiler compilers ranging from overviews of new compiler compilers for generating quality compilers to special problems of code generation and optimization Aspects of compilers for parallel systems and knowledge based development tools are also discussed *Instruction-Level Parallelism* B.R. Rau, J.A. Fisher, 2012-12-06 Instruction Level Parallelism presents a collection of papers that attempts to capture the most significant work that took place during the 1980s in the area of instruction level ILP parallel processing The papers in this book discuss both compiler techniques and actual implementation experience on very long instruction word VLIW and superscalar architectures Programming Language Implementation and Logic Programming, 1991 *PARLE '92, Parallel Architectures and Languages Europe* Daniel Etiemble, 1992-06-03 The 1992 Parallel Architectures and Languages Europe conference continues the tradition of a wide and representative international meeting of specialists from academia and industry in theory design and application of parallel computer systems set by the previous PARLE conferences held in

Eindhoven in 1987 1989 and 1991 This volume contains the 52 regular and 25 poster papers that were selected from 187 submitted papers for presentation and publication In addition five invited lectures are included The regular papers are organized into sections on implementation of parallel programs graph theory architecture optimal algorithms graph theory and performance parallel software components data base optimization and modeling data parallelism formal methods systolic approach functional programming fine grain parallelism Prolog data flow systems network efficiency parallel algorithms cache systems implementation of parallel languages parallel scheduling in data base systems semantic models parallel data base machines and language semantics

Ramalingam, 1996-06-05 In 1993 three institutes belonging respectively to the Heidelberg Academy for Humanities and Sciences to the Russian Academy of Sciences and to the Russian Academy of Medical Sciences launched a cooperative research project The main aim of the project is to develop mathematical methodologies needed for better information support in health policy decision making in the area of primary health care provision for the Russian populations affected by radiation due to the Chernobyl accident At present the major data basis of the project is the Russian National medical and Dosimetric Chernobyl Registry administered at the Medical Radiological Research Centre Obninsk The book describes the general mathematical approaches to the project and the given conditions of the registry *Adaptive Parallel Programs* Steven

Lucco,1994 Abstract This dissertation describes a methodology for compiling and executing irregular parallel programs Such programs implement parallel operations whose size and work distribution depend on input data Irregular operations pose a particularly difficult scheduling problem because the information necessary to execute these operations efficiently can not be known at the time the program is compiled This dissertation describes a set of four run time scheduling techniques that can execute many irregular parallel programs efficiently A common thread among these techniques is that they gather information about the work distribution of a program during its execution and use this information to adjust the allocation of processing resources The most important contribution of this dissertation is its identification and exploitation of work distribution locality properties Previous work on irregular parallel program scheduling unearthed the following dilemma compilers can not predict work distribution accurately enough to schedule programs efficiently however runtime load balancing solutions while more accurate incur prohibitive overhead This dissertation shows how to avoid this dilemma whenever irregular loops within parallel programs have work distribution locality that is when a loop retains a similar distribution of individual iteration execution times from one execution instance to the next An execution instance is simply an execution of the entire loop possibly in parallel Where this common case arises we exploit it through work distribution caching guessing the work distribution of a loop execution instance based on earlier measurements We also exploit work distribution locality through deferred load balancing reducing the communication overhead and thrashing potential of load balancing algorithms by applying them across multiple execution instances of a loop We evaluated these scheduling techniques using a set of application programs including climate modeling circuit simulation and x ray tomography that contain irregular parallel operations The results demonstrate that for these applications the techniques described in this dissertation achieve near optimal efficiency on large numbers of processors In addition they perform significantly better on these problems than any previously proposed static or dynamic scheduling method

Attribute Grammars, Applications and Systems H. Alblar,Břřivoj Melichar,1991 Attribute grammars have shown themselves to be a useful formalism for specifying the syntax and the static semantics of programming languages They are also useful for implementing syntax directed editors compilers translator writing systems and compiler generators and any application that has a strong syntactic base However no textbooks are available that cover the entire field To redress this imbalance anInternational Summer School on Attribute Grammars Applications and Systems was held in Prague Czechoslovakia in June 1991 The course aimed at teaching the state of the art in attribute grammars and their relation to other language specification methods This volume presents the proceedings of the school The papers are well suited for self study and a selection of them can be used for introductory courses in attribute grammars PUBLISHER S WEBSITE
