Molecular Action Of Insecticides On Ion Channels:

Molecular Action of Insecticides on Ion Channels John Marshall Clark,1995 Documents ongoing research into the molecular understanding of insecticide action including the action of insecticides on major ion channel families voltage sensitive channels ligand gated channels and biopesticide induced channels Presents recent advances in how researchers envision molecular binding sites of insecticides on ion channels and the molecular alterations of these sites resulting in site insensitive resistance mechanisms Describes new receptor ion channels and mosaic receptor organizations as novel sites of insecticide action

Ishaaya,2012-12-06 In recent years many of the conventional methods of insect control by broad spectrum synthetic chemicals have come under scrutiny because of their undesirable effects on human health and the environment In addition some classes of pesticide chemistry which generated resistance problems and severely affected the environment are no longer used It is against this background that the authors of this book present up to date findings relating to biochemical sites that can serve as targets for developing insecticides with selective properties and as the basis for the elucidation of resistance mechanisms and countermeasures The book consists of eight chapters relating to biochemical targets for insecticide action and seven chapters relating to biochemical modes of resistance and countermeasures The authors of the chapters are world leaders in pesticide chemistry biochemical modes of action and mechanisms of resistance Biochemical sites such as chitin formation juvenile hormone and ecdysone receptors acetylcholine and GABA receptors ion channels and neuropeptides are potential targets for insecticide action The progress made in recent years in molecular biology presented in depth in this volume has led to the identification of genes that confer mechanisms of resistance such as increased detoxification decreased penetration and insensitive target sites A combination of factors can lead to potentiation of the resistance level Classifications of these mechanisms are termed gene amplification changes in structural genes and modification of gene expression *Handbook of Neurotoxicology* Edward J. Massaro,2001-11-12 Neurotoxicology is a broad and burgeoning field of research Its growth in recent years can be related in part to increased interest in and concern with the fact that a growing number of anthropogenic agents with neurotoxic potential including pesticides lead mercury and the polycyclic byproducts of combustion and industrial production continue to be spewed into and accumulate in the environment In addition there is great interest in natural products including toxins as sources of therapeutic agents Indeed it is well known that many natural toxins of broadly differing structure produced or accumulated for predatory or defensive purposes and toxic agents accumulated incidentally by numerous species function to perturb nervous tissue Components of some of these toxins have been shown to be useful therapeutic agents and or research reagents Unfortunately the environmental accumulation of some neurotoxicants of anthropogenic origin especially pesticides and metals has resulted in incidents of

human poisoning some of epidemic proportion and high levels of morbidity and mortality Furthermore an increasing incidence of neurobehavioral disorders some with baffling symptoms is confronting clinicians It is not clear whether this is merely the result of increased vigilance and or improved diagnostics or a consequence of improved health care In any case the role of exposure to environmental and occupational neurotoxicants in the etiology of these phenomena as well as neurodegenerative diseases is coming under increasing scrutiny and investigation

Hayes' Handbook of Pesticide Toxicology, 2010-02-15 The Handbook of Pesticide Toxicology is a comprehensive two volume reference guide to the properties effects and regulation of pesticides that provides the latest and most complete information to researchers investigating the environmental agricultural veterinary and human health impacts of pesticide use Written by international experts from academia government and the private sector the Handbook of Pesticide Toxicology is an in depth examination of critical issues related to the need for use of and nature of chemicals used in modern pest management This updated 3e carries on the book's tradition of serving as the definitive reference on pesticide toxicology and recognizes the seminal contribution of Wayland J Hayes Jr co Editor of the first edition Presents a comprehensive look at all aspects of pesticide toxicology in one reference work Clear exposition of hazard identification and dose response relationships in each chapter featuring pesticide agents and actions All major classes of pesticide considered Different routes of exposure critically evaluated

Ion Channel Pharmacology Bernat Soria, Valentín Ceña, 1998 Molecular biology techniques have led to increased understanding of ion channel structure which has opened the way for the development of new drugs targeted at specific types of ion channels This book aims to provide a fully comprehensive single volume overview of the effects of different drugs and toxins on ionic channels with every chapter providing a detailed description of the pharmacology of each particular ion channel It will be an essential reference tool for all researchers in this topical and fast moving subject area

The Toxicology and Biochemistry of Insecticides Simon J. Yu, 2008-03-04 The first book in two decades to address this multi faceted field The Toxicology and Biochemistry of Insecticides provides the most up to date information on insecticide classification formulation mode of action resistance metabolism environmental fate and regulatory legislation The book draws on the author's groundbreaking research in insect detoxification It discusses mechanisms at the molecular level such as specific enzymes that contribute to insecticide resistance the modification of which can change insecticide susceptibility and influence host plant selections in phytophagous insects The book discusses the demand and formulation of pesticides and describes each type from dusts and powders to baits and aerosols It classifies insecticides by target chemical compound and mechanism evaluates toxicity testing procedures explains pesticide uptake mode of action and metabolism and explores species differences resistance and interactions It also considers pesticides in the environment and federal and state regulatory legislation and enforcement Publisher [Actions of Pyrazoline-type Insecticides on Mammalian Sodium Channels](#) Kristopher Scott Silver, 2005 *Handbook of Pesticide Toxicology: Principles* Robert Irving Krieger, 2001
