Radar Systems Analysis and Design Using MATLAB Bassem R. Mahafza, 2005-03-09 An introduction to radar systems should ideally be self contained and hands on a combination lacking in most radar texts The first edition of *Radar Systems Analysis and Design Using MATLAB* provided such an approach and the second edition continues in the same vein This edition has been updated expanded and reorganized to include advances in t

Modern Radar System Analysis David Knox Barton, 1988 This book presents the basic principles analyses design formulas and characteristics of various fin line configurations You ll find summaries of hundreds of rigorous formulas as well as approximate closed form expressions which can be readily programmed to generate design data for any structure Discover millimeter wave integrated circuits and components realized using the various fin line techniques presented in the text including directional couplers power dividers attenuators detectors modulators and oscillators An Artech House bestseller

Modern Radar System Analysis David K. Barton, 2007 A software that offers radar and electronic warfare engineers a tool for solving the radar equation for the maximum range at which a radar can achieve target detection under conditions of various interference sources such as thermal noise surface clutter precipitation chaff and jamming

Radar Systems Analysis and Design Using MATLAB Third Edition Bassem R. Mahafza, 2013-05-20 Developed from the author s graduate level courses the first edition of this book filled the need for a comprehensive self contained and hands on treatment of radar systems analysis and design It

quickly became a bestseller and was widely adopted by many professors. The second edition built on this successful format by rearranging and updating topics and code. Reorganized, expanded, and updated, *Radar Systems Analysis and Design Using MATLAB* Third Edition continues to help graduate students and engineers understand the many issues involved in radar systems design and analysis. Each chapter includes the mathematical and analytical coverage necessary for obtaining a solid understanding of radar theory. Additionally, MATLAB functions and programs in each chapter further enhance comprehension of the theory and provide a source for establishing radar system design requirements. Incorporating feedback from professors and practicing engineers, the third edition of this bestselling text reflects the state of the art in the field and restructures the material to be more convenient for course use. It includes several new topics and many new end-of-chapter problems. This edition also takes advantage of the new features in the latest version of MATLAB. Updated MATLAB code is available for download on the book's CRC Press web page.

Introduction to Radar Analysis Bassem R. Mahafza, 2017-11-23

Introduction to Radar Analysis Second Edition is a major revision of the popular textbook. It is written within the context of communication theory as well as the theory of signals and noise. By emphasizing principles and fundamentals, the textbook serves as a vital source for students and engineers. Part I bridges the gap between communication signal analysis and radar. Topics include modulation techniques and associated Continuous Wave (CW) and pulsed radar systems. Part II is devoted to radar signal processing and pulse compression techniques. Part III presents special topics in radar systems including radar detection, radar clutter, target tracking, phased arrays, and Synthetic Aperture Radar (SAR). Many new exercises are included, and the author provides comprehensive, easy-to-follow mathematical derivations of all key equations and formulas. The author has worked extensively for the U.S. Army, the U.S. Space and Missile Command, and other military agencies. This is not just a textbook for senior-level and graduate students but a valuable tool for practicing radar engineers.

Features:

- Authored by a leading industry radar professional.
- Comprehensive, up-to-date coverage of radar systems analysis issues.
- Easy-to-follow mathematical derivations of all equations and formulas.
- Numerous graphical plots and table-format outputs.

One part of the book is dedicated to radar waveforms and radar signal processing.

Radar System Analysis Algorithms. Radar System Analysis Models of Performance Degradation by Mutual Interference S. T. Li, NAVAL OCEAN SYSTEMS CENTER SAN DIEGO CA., 1978

This report provides an overview of current radar system analysis models. It is an initial effort toward a radar system analysis capability as part of the Electromagnetic Environment (EMX) Program. The principles and approach of the EMX Program are outlined; existing radar system analysis models are briefly discussed, and a functional background of basic radar systems and environments is provided. The major effort is a narrative analysis of the principles and limitations of current radar analytical models and techniques. A new radar system analysis model is offered, and the development of both a
