L. Lehmann* Javier Rojo,2012-01-16 These volumes present a selection of Erich L Lehmann s monumental contributions to Statistics These works are multifaceted His early work included fundamental contributions to hypothesis testing theory of point estimation and more generally to decision theory His work in Nonparametric Statistics was groundbreaking His fundamental contributions in this area include results that came to assuage the anxiety of statisticians that were skeptical of nonparametric methodologies and his work on concepts of dependence has created a large literature The two volumes are divided into chapters of related works Invited contributors have critiqued the papers in each chapter and the reprinted group of papers follows each commentary A complete bibliography that contains links to recorded talks by Erich Lehmann and which are freely accessible to the public and a list of Ph D students are also included These volumes belong in every statistician s personal collection and are a required holding for any institutional library **Selected Works of Terry Speed** T. Selected Papers on Wave Mechanics Louis de Broglie,Léon Brillouin,1928 **Selected Works of C.C. Heyde** Ross Maller,Ishwar Basawa,Peter Hall,Eugene Seneta,2010-09-17 In 1945 very early in the history of the development of a rigorous analytical theory of probability Feller 1945 wrote a paper called The fundamental limit theorems in probability in which he set out what he considered to be the two most important limit theorems in the modern theory of probability the central limit theorem and the recently discovered Kolmogoroff s celebrated law of the iterated logarithm A little later in the article he added to these via a charming description the little brother of the central limit theorem the weak law of large

numbers and also the strong law of large numbers which he considers as a close relative of the law of the iterated logarithm Feller might well have added to these also the beautiful and highly applicable results of renewal theory which at the time he himself together with eminent colleagues were vigorously producing Feller's introductory remarks include the visionary The history of probability shows that our problems must be treated in their greatest generality only in this way can we hope to discover the most natural tools and to open channels for new progress This remark leads naturally to that characteristic of our theory which makes it attractive beyond its importance for various applications a combination of an amazing generality with algebraic precision Selected Papers Gishirō Maruyama,1988 *Selected Works of A. N. Kolmogorov* A.N.

Shiryayev,1992-02-29 The creative work of Andrei N Kolmogorov is exceptionally wide ranging In his studies on trigonometric and orthogonal series the theory of measure and integral mathematical logic approximation theory geometry topology functional analysis classical mechanics ergodic theory superposition of functions and in formation theory he solved many conceptual and fundamental problems and posed new questions which gave rise to a great deal of further research Kolmogorov is one of the founders of the Soviet school of probability theory mathematical statistics and the theory of turbulence In these areas he obtained a number of central results with many applications to mechanics geophysics linguistics and biology among other subjects This edition includes Kolmogorov's most important papers on mathematics and the natural sciences It does not include his philosophical and pedagogical studies his articles written for the Bolshaya Sovetskaya Entsiklopediya his papers on prosody and applications of mathematics or his publications on general questions The material of this edition was selected and compiled by Kolmogorov himself The first volume consists of papers on mathematics and also on turbulence and classical mechanics The second volume is devoted to probability theory and mathematical statistics The focus of the third volume is on information theory and the theory of algorithms **Selected Papers** Jacob

Wolfowitz,1980-04-08 From the Introduction This volume of selected papers of Jacob Wolfowitz is published to honor the 70th birthday of this leader of research in statistical inference and information theory We have made an attempt to organize the material into sections based on subject matter Since Wolfowitz's many interests have persisted over time the sections do not represent chronological divisions We have tried to choose the papers we regarded as most important among Wolfowitz's work in terms of their further influence or sometimes a paper that contains what we found a striking idea of him A further consideration was the lucidity of his explanations that we mentioned in describing his teaching some of his papers contain intuition of heuristics that no statistician should miss *Selected Papers of M.S. Bartlett* Maurice Stevenson Bartlett,1989

Selected Works of Willem van Zwet Sara van de Geer,Marten Wegkamp,2011-12-21 With this collections volume some of the important works of Willem van Zwet are moved to the front layers of modern statistics The selection was based on discussions with Willem and aims at a representative sample The result is a collection of papers that the new generations of statisticians should not be denied They are here to stay to enjoy and to form the basis for further research The papers are

grouped into six themes fundamental statistics asymptotic theory second order approximations resampling applications and probability This volume serves as basic reference for fundamental statistical theory and at the same time reveals some of its history The papers are grouped into six themes fundamental statistics asymptotic theory second order approximations resampling applications and probability This volume serves as basic reference for fundamental statistical theory and at the same time reveals some of its history
