Selective Sentinel Lymphadenectomy For Human Solid Cancer:

Selective Sentinel Lymphadenectomy for Human Solid Cancer Stanley P. L. Leong, Yuko Kitagawa, Masaki Kitajima, 2006-06-20 In human solid cancer the lymph node LN status is the most important prognostic indicator for the clinical outcome of patients. Recent developments in the sentinel lymph node SLN concept and technology have resulted in the application of this revolutionary approach to define the first draining or SLN to which the cancer may have metastasized. The underlying thesis in solid cancer biology is that metastasis generally starts in an orderly progression spreading through the lymphatic channels to the SLN in the nearest LN basin. Thus the logical approach is to harvest that specific SLN for thorough analysis. Because a tumor-free SLN is usually associated with a negative residual LN basin, a negative SLN is an excellent indication that micrometastasis has not occurred in the regional LNs. When the SLN is involved, it is unknown whether or not metastasis is limited only to the SLN or if the disease has spread to the remainder of the nodal basin. For this reason, if a SLN is positive, a complete lymph node dissection is recommended. Therefore, selective sentinel lymphadenectomy (SSL) should be considered as a staging procedure so that patients with negative SLNs (about 80%) may be spared an extensive LN dissection. Malignant melanoma has been proven to be the most ideal tumor model to study the role of SLN. Subsequently, SSL has been applied to breast cancer, colon cancer, and other types of solid cancer. The multidisciplinary approach encompassing the surgeon, nuclear medicine physician, and pathologist is the key to such a successful procedure. Such a team can be formed readily with appropriate training. Beyond the technical aspects of harvesting the SLN, the implication of micrometastasis remains to be defined. Because the follow-up of melanoma and breast cancer patients after SSL is crucial, ongoing clinical trials are in progress to determine the biological and clinical significance of SLNs. Although the concept of SLN is viable in other types of cancer such as gynecological and gastrointestinal, the technical aspects of the procedure need to be perfected and verified. The most exciting possibility of SSL is that it will lead to early diagnosis of micrometastasis in regional LNs. Early diagnosis makes it useful as a clinical staging procedure and opens up new opportunities to study micrometastasis and its evolution within the SLNs. Examining the multifaceted aspects of micrometastasis such as differentiation of different clones with respect to the primary tumor, acquisition of adhesion molecules, and host interaction with the microscopic tumor will shed new light on the biology of early metastasis. New molecular and genetic tools may be used to dissect the mechanisms of lymphatic and hematogenous routes of metastasis. If such mechanisms can be understood, new therapeutic advances may be developed to prevent the process of micrometastasis. Rather than targeting larger tumor burdens such as Stage IV disease, targeted adjuvant clinical trials can be developed for high-risk patients following definitive surgical resection. SSL is a standard staging procedure for patients with melanoma and is rapidly evolving into a standard procedure for breast cancer as well.

Selective Sentinel Lymphadenectomy for Human Solid Cancer Stanley P. L. Leong, Yuko Kitagawa, Masaki Kitajima, 2008-11-01 First book to apply the concept of SSL to the majority of human cancers

Revolutionary new concept that might significantly transform surgical cancer treatment Focuses on cancer metastasis and explores the biological frontier of micro metastasis Includes illustrations by experts in the field on how to successfully perform SSL

Cancer Metastasis and the Lymphovascular System: Stanley P. L. Leong, 2007-09-05 Sentinel lymph node SLN procedures have opened a window of opportunity for the study of micrometastasis In eighty percent 80% of metastasis there lies an orderly pattern of progression via the lymphatic network while 20% of the time systemic metastasis occurs bypassing the lymphatic system During the past two decades significant progress has been achieved in understanding the anatomical functional cellular and molecular aspects of the lymphovascular system and the metastasis process Molecular imaging advances help to localize early cancers more precisely Current status of the immune responses in the draining lymph nodes against cancer is summarized New paradigms of early cancer growth proliferation overcoming apoptosis are exploited in the development of anticancer treatment In this book basic scientists and clinicians exchange ideas so that laboratory findings can be applied to clinical dilemmas and clinical problems can be targeted for research in the laboratory

New Technologies in Surgical Oncology Antonio Mussa, 2009-12-08 Oncological surgeons are often requested in their clinical practice to identify and manage uncommon and complex situations It is therefore of the utmost importance that they are well aware of the most recent technological evolutions in order to achieve the best possible results in term of oncological outcome with a concern on quality of life and economical issues Furthermore new techniques can give a fundamental contribution in overcoming the limitations of standard approaches An essential aim of this book is to underline the great importance and the need of an effective coordination of multi disciplinary care among surgeons medical oncologists radiation therapists plastic surgeons and ancillary services in order to optimise patient outcome

Late Effects of Treatment for Brain Tumors Stewart Goldman, Christopher D. Turner, 2009-10-16 Late Effects of Treatment for Brain Tumors reviews the development of the medical team s awareness of late effects of brain tumor treatment and an overview of brain tumor survivorship It reviews the late effects by topic and by organ systems educates and provides guidelines for follow up and interventions for patient survivorship Advocacy for survivors and models for the importance of coordinated late effects programs are also discussed
