Arantes, Pushpa N. Rathie, 1991 **Modulated Coding for Digital Communication Systems Under ISI/Multipath Fading and Jamming**, 2000 This report describes the main research achievements during the time period cited above on the research project in the area of telecommunications The main achievements include the systematic study of modulated codes that are convolutional codes defined on real complex field over intersymbol interference multipath jamming channels We obtained the joint maximum likelihood decoding and the MMSE DFE decoding algorithms We proved the existence of the coding gain compared to the uncoded AWGN channel We also obtained space time modulated codes for multiple transmit and multiple receive antenna systems A new precoded OFDM system was also obtained which is robust to spectral nulls [IEEE International Symposium on Information Theory](#), 1997 **Conference Record**, 1999 [The Power Spectrum of Constrained Binary Modulation Codes](#) Panagiotis Gallopoulos, 1989 [Applied Algebra, Algebraic Algorithms, and Error-correcting Codes](#), 1990 **Topics in Coding Theory** Lars H. Zetterberg, Göran Einarsson, Thomas Ericson, Rolf Johannesson, Kamil Zigangirov, Carl-Eric Sundberg, 1989-08-31 This book is written in honour of Professor Lars H Zetterberg who is the pioneer of information and coding theory in Sweden and his direct and indirect influence on the evaluation in Sweden of these topics is quite considerable The various contributions give overviews of different topics within the area of coding theory Each covers a speciality where in most cases good overviews are not easily available The five papers together provide a good and representative sample of Swedish research activities within the field of coding theory **International ITG Conference Source and Channel Coding**, 2004 **Coded Modulation and Bandwidth-efficient Transmission** Ezio Biglieri, Marco Luise, 1992 Almost two decades ago by using random coding bound arguments it was proved that considerable progress in the power efficiency of digital communication could be obtained by treating coding and modulation as a single entity These ideas were carried further in the manifestation of Trellis Coded Modulation TCM techniques Since then the idea of TCM has expanded greatly beyond the type of schemes originally presented and has given way to a considerable amount of research activity both theoretical and applied and to the implementation of several TCM techniques

in new generations of modems Block Coded Modulation BCM was discovered at about the same time as TCM and is currently attracting considerable interest as a possible alternative to TCM for some applications A thorough overview on both kinds of coded modulation is discussed in this volume It assesses the status and the prospects of coded modulation and of bandwidth efficient transmission shedding light on the future avenue of theory and applications in these exciting areas *Conference Proceedings*, 2003 Fundamentals of Convolutional Coding Rolf Johannesson, Kamil Sh.
