## **Moduli Of Vector Bundles:**

Moduli of Vector Bundles Masaki Maruyama,2023-05-31 Contains papers presented at the 35th Taniguchi International Symposium held recently in Sanda and Kyoto Japan Details the latest developments concerning moduli spaces of vector bundles or instantons and their application Covers a broad array of topics in both differential and algebraic geometry

*Compact Moduli Spaces and Vector Bundles* Valery Alexeev,2012 This book contains the proceedings of the conference on Compact Moduli and Vector Bundles held from October 21 24 2010 at the University of Georgia This book is a mix of survey papers and original research articles on two related subjects Compact Moduli spaces of algebraic varieties including of higher dimensional stable varieties and pairs and Vector Bundles on such compact moduli spaces including the conformal block bundles These bundles originated in the 1970s in physics the celebrated Verlinde formula computes their ranks Among the surveys are those that examine compact moduli spaces of surfaces of general type and others that concern the GIT constructions of log canonical models of moduli of stable curves The original research articles include among others papers on a formula for the Chern classes of conformal classes of conformal block bundles on the moduli spaces of stable curves on Looijenga s conjectures on algebraic and tropical Brill Noether theory on Green s conjecture on rigid curves on moduli of curves and on Steiner surfaces

Algebraic Stacks and Moduli of Vector Bundles Frank Neumann,2009 **Moduli Spaces and Vector Bundles** Leticia Brambila-Paz,Steven B. Bradlow,Oscar García-Prada,S. Ramanan,2009-05-21 Vector bundles and their associated moduli spaces are of fundamental importance in algebraic geometry In recent decades this subject has been greatly enhanced by its relationships with other areas of mathematics including differential geometry topology and even theoretical physics specifically gauge theory quantum field theory and string theory Peter E Newstead has been a leading figure in this field almost from its inception and has made many seminal contributions to our understanding of moduli spaces of stable bundles This volume has been assembled in tribute to Professor Newstead and his contribution to algebraic geometry Some of the subject s leading experts cover foundational material while the survey and research papers focus on topics at the forefront of the field This volume is suitable for both graduate students and more experienced researchers

**Moduli Spaces and Vector Bundles—New Trends** Peter Gothen,Margarida Melo,Montserrat Teixidor i Bigas,2024-07-18 This volume contains the proceedings of the VBAC 2022 Conference on Moduli Spaces and Vector Bundles New Trends held in honor of Peter Newstead s 80th birthday from July 25 29 2022 at the University of Warwick Coventry United Kingdom The papers focus on the theory of stability conditions in derived categories non reductive geometric invariant theory Brill Noether theory and Higgs bundles and character varieties The volume includes both survey and original research articles Most articles contain substantial background and will be helpful to both novices and experts *On Motives and moduli spaces of stable vector bundles over a curve* Sebastian del Baño Rollin,Pascual Gainza, Pere,1998

*Grassmannians, Moduli Spaces and Vector Bundles* David Ellwood,Emma Previato,2011 This collection of cutting edge

articles on vector bundles and related topics originated from a CMI workshop held in October 2006 that brought together a community indebted to the pioneering work of P E Newstead visiting the United States for the first time since the 1960s Moduli spaces of vector bundles were then in their infancy but are now as demonstrated by this volume a powerful tool in symplectic geometry number theory mathematical physics and algebraic geometry In fact the impetus for this volume was to offer a sample of the vital convergence of techniques and fundamental progress taking place in moduli spaces at the outset of the twenty first century This volume contains contributions by J E Andersen and N L Gammelgaard Hitchin s projectively flat connection and Toeplitz operators M Aprodu and G Farkas moduli spaces D Arcara and A Bertram stability in higher dimension L Jeffrey intersection cohomology J Kamnitzer Langlands program M Lieblich arithmetic aspects P E Newstead coherent systems G Pareschi and M Popa linear series on Abelian varieties and M Teixidor i Bigas bundles over reducible curves These articles do require a working knowledge of algebraic geometry symplectic geometry and functional analysis but should appeal to practitioners in a diversity of fields No specialization should be necessary to appreciate the contributions or possibly to be stimulated to work in the various directions opened by these path blazing ideas to mention a few the Langlands program stability criteria for vector bundles over surfaces and threefolds linear series over abelian varieties and Brauer groups in relation to arithmetic properties of moduli spaces

**Vector Bundles** Andrej N. Tjurin, 2008 This is the first volume of a three volume collection of Andrey Nikolaevich Tyurin s Selected Works It includes his most interesting articles in the field of classical algebraic geometry written during his whole career from the 1960s Most of these papers treat different problems of the theory of vector bundles on curves and higher dimensional algebraic varieties a theory which is central to algebraic geometry and most of its applications

**The Moduli Spaces of Vector Bundles on Threefolds, Surfaces and Curves I** Andrej N. Tjurin, 1990

**Geometric Invariant Theory and Decorated Principal Bundles** Alexander H. W. Schmitt, 2008 The book starts with an introduction to Geometric Invariant Theory GIT The fundamental results of Hilbert and Mumford are exposed as well as more recent topics such as the instability flag the finiteness of the number of quotients and the variation of quotients In the second part GIT is applied to solve the classification problem of decorated principal bundles on a compact Riemann surface The solution is a quasi projective moduli scheme which parameterizes those objects that satisfy a semistability condition originating from gauge theory The moduli space is equipped with a generalized Hitchin map Via the universal Kobayashi Hitchin correspondence these moduli spaces are related to moduli spaces of solutions of certain vortex type equations Potential applications include the study of representation spaces of the fundamental group of compact Riemann surfaces The book concludes with a brief discussion of generalizations of these findings to higher dimensional base varieties positive characteristic and parabolic bundles The text is fairly self contained e g the necessary background from the theory of principal bundles is included and features numerous examples and exercises It addresses students and researchers with a
