Advances in Enterprise Engineering III Antonia Albani, Jan Dietz, 2009-06-04 In the era of continuous changes in internal organizational settings and external business environments such as new regulations and business opportunities modern enterprises are subject to extensive research and study For the understanding design and engineering of modern enterprises and their complex business processes the discipline of enterprise engineering requires sound engineering principles and systematic approaches based on rigorous theories Along with that a paradigm shift seems to be needed for addressing these issues adequately The main paradigm shift is the consideration of an enterprise and its business processes as a social system In its social setting an enterprise and its business processes represent actors with certain authorities and assigned roles who assume certain responsibilities in order

to provide a service to its environment Second to that a paradigm shift is to look at an enterprise as an artifact purposefully designed for a certain mission and goal The need for this paradigm shift along with the complexity and agility of modern enterprises gives inspiration for the emerging discipline of enterprise engineering that requires development of new theories and methodologies To this end the prominent methods and tools of modeling and simulation play a significant role Both conceptual modeling and simulation are widely used for understanding analyzing and engineering an enterprise its organization and business processes

Kokula Krishna Hari K, Innovations in Multi-Agent Systems and Application - 1 Dipti Srinivasan,2010-08-10 This book provides an overview of multi agent systems and several applications that have been developed for real world problems Multi agent systems is an area of distributed artificial intelligence that emphasizes the joint behaviors of agents with some degree of autonomy and the complexities arising from their interactions Multi agent systems allow the subproblems of a constraint satisfaction problem to be subcontracted to different problem solving agents with their own interest and goals This increases the speed creates parallelism and reduces the risk of system collapse on a single point of failure Different multi agent architectures that are tailor made for a specific application are possible They are able to synergistically combine the various computational intelligent techniques for attaining a superior performance This gives an opportunity for bringing the advantages of various techniques into a single framework It also provides the freedom to model the behavior of the system to be as competitive or coordinating each having its own advantages and disadvantages
