## **New Optimization Algorithms In Physics:**

**New Optimization Algorithms in Physics** Alexander K. Hartmann, Heiko Rieger, 2006-03-06 Many physicists are not aware of the fact that they can solve their problems by applying optimization algorithms Since the number of such algorithms is steadily increasing many new algorithms have not been presented comprehensively until now This presentation of recently developed algorithms applied in physics including demonstrations of how they work and related results aims to encourage their application and as such the algorithms selected cover concepts and methods from statistical physics to optimization problems emerging in theoretical computer science [Optimization Algorithms in Physics](#) Alexander K. Hartmann, Heiko Rieger, 2002-02-25 The past few years have witnessed a substantial growth in the number of applications for optimization algorithms in solving problems in the field of physics Examples include determining the structure of molecules estimating the parameters of interacting galaxies the ground states of electronic quantum systems the behavior of disordered magnetic materials and phase transitions in combinatorial optimization problems This book serves as an introduction to the field while also presenting a complete overview of modern algorithms The authors begin with the relevant foundations from computer science graph theory and statistical physics before moving on to thoroughly explain algorithms backed by illustrative examples They include pertinent mathematical transformations which in turn are used to make the physical problems tractable with methods from combinatorial optimization Throughout a number of interesting results are shown for all physical examples The final chapter provides numerous practical hints on software development testing programs and evaluating the results of computer experiments **A New Meta-heuristic Optimization Algorithm Based on the String Theory Paradigm from Physics** Oscar Castillo, Luis Rodriguez, 2021-08-18 This book focuses on the fields of nature inspired algorithms optimization problems and fuzzy logic In this book a new metaheuristic based on String Theory from Physics is proposed It is important to mention that we have proposed the new algorithm to generate new potential solutions in optimization problems in order to find new ways that could improve the results in solving these problems We are presenting the results for the proposed method in different cases of study The first case is optimization of traditional benchmark mathematical functions The second case is the optimization of benchmark functions of the CEC 2015 Competition and we are also presenting results of the CEC 2017 Competition on Constrained Real Parameter Optimization that are problems that contain the presence of constraints that alter the shape of the search space making them more difficult to solve Finally in the third case we are presenting the optimization of a fuzzy inference system specifically for finding the optimal design of a fuzzy controller for an autonomous mobile robot It is important to mention that in all study cases we are presenting statistical tests in order to validate the performance of proposed method In summary we believe that this book will be of great interest to a wide audience ranging from engineering and science graduate students to researchers and professors in computational intelligence metaheuristics optimization robotics and control **Algorithms and Theory of Computation Handbook,**

**Volume 1** Mikhail J. Atallah, Marina Blanton, 2009-11-20 *Algorithms and Theory of Computation Handbook Second Edition General Concepts and Techniques* provides an up to date compendium of fundamental computer science topics and techniques It also illustrates how the topics and techniques come together to deliver efficient solutions to important practical problems Along with updating and revising many *Innovative Computational Intelligence: A Rough Guide to 134 Clever Algorithms* Bo Xing, Wen-Jing Gao, 2013-12-13 The first notable feature of this book is its innovation Computational intelligence CI a fast evolving area is currently attracting lots of researchers attention in dealing with many complex problems At present there are quite a lot competing books existing in the market Nevertheless the present book is markedly different from the existing books in that it presents new paradigms of CI that have rarely mentioned before as opposed to the traditional CI techniques or methodologies employed in other books During the past decade a number of new CI algorithms are proposed Unfortunately they spread in a number of unrelated publishing directions which may hamper the use of such published resources These provide us with motivation to analyze the existing research for categorizing and synthesizing it in a meaningful manner The mission of this book is really important since those algorithms are going to be a new revolution in computer science We hope it will stimulate the readers to make novel contributions or even start a new paradigm based on nature phenomena Although structured as a textbook the book s straightforward self contained style will also appeal to a wide audience of professionals researchers and independent learners We believe that the book will be instrumental in initiating an integrated approach to complex problems by allowing cross fertilization of design principles from different design philosophies The second feature of this book is its comprehensiveness Through an extensive literature research there are 134 innovative CI algorithms covered in this book **Decision Science in Action** Kusum Deep, Madhu Jain, Said Salhi, 2018-09-12 This book provides essential insights into a range of newly developed numerical optimization techniques with a view to solving real world problems Many of these problems can be modeled as nonlinear optimization problems but due to their complex nature it is not always possible to solve them using conventional optimization theory Accordingly the book discusses the design and applications of non conventional numerical optimization techniques including the design of benchmark functions and the implementation of these techniques to solve real world optimization problems The book s twenty chapters examine various interesting research topics in this area including Pi fraction based optimization of the Pantoja Bretones Martin PBM antenna benchmarks benchmark function generators for single objective robust optimization algorithms convergence of gravitational search algorithms on linear and quadratic functions and an algorithm for the multi variant evolutionary synthesis of nonlinear models with real valued chromosomes Delivering on its promise to explore real world scenarios the book also addresses the seismic analysis of a multi story building with optimized damper properties the application of constrained spider monkey optimization to solve portfolio optimization problems the effect of upper body motion on a bipedal robot s stability an ant colony algorithm for routing alternate fuel vehicles in multi depot vehicle routing

problems enhanced fractal dimension based feature extraction for thermal face recognition and an artificial bee colony based hyper heuristic for the single machine order acceptance and scheduling problem The book will benefit not only researchers but also organizations active in such varied fields as Aerospace Automotive Biotechnology Consumer Packaged Goods Electronics Finance Business Banking Oil Gas Geosciences and Pharma to name a few *Smart Maintenance for Human-Robot Interaction* Bo Xing, Tshilidzi Marwala, 2017-09-08 This self contained book written by active researchers presents up to date information on smart maintenance strategies for human robot interaction HRI and the associated applications of novel search algorithms in a single volume eliminating the need to consult scattered resources Unlike other books it addresses maintaining a smart HRI from three dimensions namely hardware cyberware and hybrid asset management covering problems encountered in each through a wide variety of representative examples and elaborated illustrations Further the diverse mathematical models and intelligent systems constructions make the book highly practical It enables readers interested in maintenance robotics and intelligent systems but perplexed by myriads of interrelated issues to grasp basic methodologies At the same time the referenced literature can be used as a roadmap for conducting deeper researches
