Abstract

Discrete optimization problems (DOPs) arise in various applications such as planning, scheduling, computer aided design, robotics, game playing and constraint directed reasoning. Often, a DOP is formulated in terms of finding a (minimum cost) solution path in a graph from an initial node to a goal node and solved by graph/tree search methods such as branch-and-bound and dynamic programming. Availability of parallel computers has created substantial interest in exploring the use of parallel processing for solving discrete optimization problems. This article provides an overview of parallel search algorithms for solving discrete optimization problems.

1 Introduction.

Discrete optimization problems (DOPs) arise in various applications such as planning, scheduling, computer aided design, robotics, game playing and constraint directed reasoning. Formally, a DOP can be stated as follows : *Given a finite discrete set X and a function $f(x)$ defined on the elements of X , find an optimal element x_{opt} , such that, $f(x_{opt}) = \min\{f(x)/x \in X\}$. Parallel Processing of Discrete Optimization Problems Panos M. Pardalos, Mauricio G. C. Resende, K. G.

Ramakrishnan, 1995-01-01 This book contains papers presented at the Workshop on Parallel Processing of Discrete Optimization Problems held at DIMACS in April 1994. The contents cover a wide spectrum of the most recent algorithms and applications in parallel processing of discrete optimization and related problems. Topics include parallel branch and bound algorithms, scalability, load balancing, parallelism, and irregular data structures and scheduling task graphs on parallel machines. Applications include parallel algorithms for solving satisfiability problems, location problems, linear programming, quadratic and linear assignment problems. This book would be suitable as a textbook in advanced courses on parallel algorithms and combinatorial optimization. *Parallel Processing of Discrete Optimization Problems* Panos M. Pardalos, 1995

Intelligent Information Systems Mieczyslaw Kłopotek, Maciej Michalewicz, Sławomir T. Wierzchon, 2012-08-10 This volume contains articles accepted for presentation during The Intelligent Information Systems Symposium IIS 2000 which was held in Bystra, Poland, on June 12-16, 2000. This is the ninth in the order symposium organized by the Institute of Computer Science of the Polish Academy of Sciences and devoted to new trends in broadly understood Artificial Intelligence. The idea of organizing such meetings dates back to 1992. Our main intention guided the first rather small audience workshop in the series was to resume the results gained in Polish scientific centers as well as contrast them with the research performed by Polish scientists working at the universities in Europe and USA. This idea proved to be attractive enough that we decided to continue such meetings. As the years went by, the workshops have transformed into regular symposia devoted to such fields like Machine Learning, Knowledge Discovery, Natural Language Processing, Knowledge Based Systems and Reasoning, and Soft Computing, Le Fuzzy and Rough Sets, Bayesian Networks, Neural Networks, and Evolutionary Algorithms. At present, about 50 papers prepared by researchers from Poland and other countries are usually presented. Besides, for several years now, the symposia are accompanied by a number of tutorials given by the outstanding scientists in their domain. Up to this year, the proceedings were published as our local publication and they were distributed among the scientific libraries. We feel, however, that the subject matter as well as the quality of papers is sufficient to present the proceedings to a broader scientific audience. **Transportation Science**, 1995 **ICPP 2006**, 2006 Workshop on Web Services based Grid Applications WSGA Workshop on Parallel and Distributed Multimedia PDM the Workshop on Wireless and Sensor Networks WSN 3rd

The third edition of this handbook is designed to provide a broad coverage of the concepts implementations and applications in metaheuristics The book s chapters serve as stand alone presentations giving both the necessary underpinnings as well as practical guides for implementation The nature of metaheuristics invites an analyst to modify basic methods in response to problem characteristics past experiences and personal preferences and the chapters in this handbook are designed to facilitate this process as well This new edition has been fully revised and features new chapters on swarm intelligence and automated design of metaheuristics from flexible algorithm frameworks The authors who have contributed to this volume represent leading figures from the metaheuristic community and are responsible for pioneering contributions to the fields they write about Their collective work has significantly enriched the field of optimization in general and combinatorial optimization in particular Metaheuristics are solution methods that orchestrate an interaction between local improvement procedures and higher level strategies to create a process capable of escaping from local optima and performing a robust search of a solution space In addition many new and exciting developments and extensions have been observed in the last few years Hybrids of metaheuristics with other optimization techniques like branch and bound mathematical programming or constraint programming are also increasingly popular On the front of applications metaheuristics are now used to find high quality solutions to an ever growing number of complex ill defined real world problems in particular combinatorial ones This handbook should continue to be a great reference for researchers graduate students as well as practitioners interested in metaheuristics
