Operator Theory in Function Spaces Kehe Zhu, 2007 This book covers Toeplitz operators Hankel operators and composition operators on both the Bergman space and the Hardy space The setting is the unit disk and the main emphasis is on size estimates of these operators boundedness compactness and membership in the Schatten classes Most results concern the relationship between operator theoretic properties of these operators and function theoretic properties of the inducing symbols Thus a good portion of the book is devoted to the study of analytic function spaces such as the Bloch space Besov spaces and BMOA whose elements are to be used as symbols to induce the operators we study The book is intended for both research mathematicians and graduate students in complex analysis and operator theory The prerequisites are minimal a graduate course in each of real analysis complex analysis and functional analysis should sufficiently prepare the reader for the book Exercises and bibliographical notes are provided at the end of each chapter These notes will point the reader to additional results and problems Kehe Zhu is a professor of mathematics at the State University of New York at Albany His previous books include Theory of Bergman Spaces Springer 2000 with H Hedenmalm and B Korenblum and Spaces of Holomorphic Functions in the Unit Ball Springer 2005 His current research interests are holomorphic function spaces and operators acting on them

Noncommutative Function-Theoretic Operator Theory and Applications Joseph A.

Ball, Vladimir Bolotnikov, 2021-12-16 This concise volume shows how ideas from function and systems theory lead to new

explaining the basic theory of finite dimensional and bounded systems in a way suitable for graduate courses in systems theory and control They then proceed to the more advanced infinite dimensional setting opening up new ways for researchers to study distributed parameter systems including linear port Hamiltonian systems and boundary triplets They include the general non passive part of the theory in continuous and discrete time and provide a short introduction to the passive situation Numerous examples from circuit theory are used to illustrate the theory

Invariant Subspaces of the Shift Operator Javad Mashregi, Emmanuel Fricain, William Ross, 2015-04-23 This volume contains the proceedings of the CRM Workshop on Invariant Subspaces of the Shift Operator held August 26-30 2013 at the Centre de Recherches Mathématiques Université de Montréal Montréal Québec Canada The main theme of this volume is the invariant subspaces of the shift operator or its adjoint on certain function spaces in particular the Hardy space Dirichlet space and de Branges-Rovnyak spaces These spaces and the action of the shift operator on them have turned out to be a precious tool in various questions in analysis such as function theory Bieberbach conjecture rigid functions Schwarz-Pick inequalities operator theory invariant subspace problem composition operator and systems and control theory Of particular interest is the Dirichlet space which is one of the classical Hilbert spaces of holomorphic functions on the unit disk From many points of view the Dirichlet space is an interesting and challenging example of a function space Though much is known about it several important open problems remain most notably the characterization of its zero sets and of its shift invariant subspaces This book is co-published with the Centre de Recherches Mathématiques
