Predicative Arithmetic Mathematical Notes No 32:

Mathematics and Metaphilosophy Justin Clarke-Doane, 2022-06-30 This Element discusses the problem of mathematical knowledge and its broader philosophical ramifications. It argues that the challenge to explain the defeasible justification of our mathematical beliefs, the justificatory challenge, arises insofar as disagreement over axioms bottoms out in disagreement over intuitions. And it argues that the challenge to explain their reliability, the reliability challenge, arises to the extent that we could have easily had different beliefs. The Element shows that mathematical facts are not in general empirically accessible, contra Quine, and that they cannot be dispensed with, contra Field. However, it argues that they might be so plentiful that our knowledge of them is unmysterious. The Element concludes with a complementary pluralism about modality, logic, and normative theory, highlighting its surprising implications. Metaphysically, pluralism engenders a kind of perspectivalism and indeterminacy. Methodologically, it vindicates Carnap's pragmatism transposed to the key of realism.

The Palgrave Companion to the Philosophy of Set Theory Carolin Antos, Neil Barton, Giorgio Venturi, 2025-04-17 This volume showcases some of the up and coming voices of an emerging field, the philosophy of set theory, which in recent years has gained prominence in the philosophy of mathematics. The chapters in this volume both present new topics and propose solutions to old problems. It contains a broad picture of the philosophy of set theory, examining questions from epistemology and ontology, whilst touching on the use of formal theories in the study of mathematical infinity. Key features of this volume: Explores new and interesting connections between philosophy, set theory, and the study of infinity. Considers questions intended to appeal to a wider audience in both philosophy and mathematical logic. Examines three key areas of study: Epistemology, Formal Theories, and Ontology. The book provides a key reference text for future debates and is ideal for both newcomers to the philosophy of set theory and established researchers in the field. **Morality and Mathematics**

Justin Clarke-Doane, 2020 Are there moral facts? Are there mathematical facts? Many say yes to the latter but no to the former. Justin Clarke-Doane argues that the situation is much more subtle: although there are no real moral facts, morality is objective in a paradigmatic respect. Conversely, while there are real mathematical facts, mathematics fails to be objective.

Metamathematics of First-Order Arithmetic Petr Hájek, Pavel Pudlák, 2017-03-02 Since their inception, the Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians. Many of the original books in the series have been unavailable for years, but they are now in print once again. This volume, the third publication in the Perspectives in Logic series, is a much-needed monograph on the metamathematics of first-order arithmetic. The authors pay particular attention to subsystems, fragments of Peano arithmetic, and give the reader a deeper understanding of the role of the axiom schema of induction and of the phenomenon of incompleteness. The reader is only assumed to know the basics of mathematical logic, which are reviewed in the preliminaries. Part I develops parts of mathematics and logic in various fragments. Part II is devoted to incompleteness. Finally, Part III studies systems that have the induction schema restricted to

Petkov, 2012-12-06 Heyting 88 Summer School and Conference on Mathematical Logic held September 13-23 1988 in Chaika Bulgaria was honourably dedicated to Arend Heyting's 90th anniversary. It was organized by Sofia University Kliment Ohridski on the occasion of its centenary and by the Bulgarian Academy of Sciences with sponsorship of the Association for Symbolic Logic. The Meeting gathered some 115 participants from 19 countries. The present volume consists of invited and selected papers. Included are all the invited lectures submitted for publication and the 14 selected contributions chosen out of 56 submissions by the Selection Committee. The selection was made on the basis of reports of PC members, an average of 4 per submission. All the papers are concentrated on the topics of the Meeting: Recursion Theory, Modal and Non-classical Logics, Intuitionism and Constructivism, Related Applications to Computer and Other Sciences, Life and Work of Arend Heyting. I am pleased to thank all persons and institutions that contributed to the success of the Meeting: sponsors, Programme Committee members and additional referees, the members of the Organizing Committee, our secretaries K.
