Neural Control Of Reproduction Physiology And Behavior:

Neural Control of Reproduction Kei-ichiro Maeda, Hiroko Tsukamura, Akira Yokoyama, 1997 Reproductive processes in mammals consist of a series of physiological events spermatogenesis follicular growth ovulation progestational stage gestation parturition and postpartum nurturing including lactation In order for offspring to be reproduced effectively these processes must proceed in the proper chronological order In this regard the brain pituitary gland and gonads make up a dynamic axis in which the brain holds first place Reproductive behaviors corresponding to each physiological event such as copulatory and maternal behaviors must be synchronously expressed for successful reproduction These behaviors are considered to be the expression of higher brain function but the expression is strictly regulated by various components of the axis By focusing on neural activities this book improves understanding of the physiological processes and behaviors involved in reproduction **Neural Control of Reproduction; Physiology and Behavior** □□□□□, □□□□, 1997

Division of Research Grants, 1974 **Proceedings of the 6th International Symposium on the Reproductive Physiology of Fish** Birgitta Norberg, 2000 Neuroendocrinology of Reproduction Norman Adler, 2012-12-06 The subject of this book is neuroendocrinology that branch of biological science devoted to the interactions between the two major integrative organ systems of animals the endocrine and nervous systems Although this science today reflects a fusion of endocrinology and neurobiology this synthetic approach is relatively recent At the beginning of the 20th century when the British physiologists Bayliss and Starling first proposed endocrinology to be an independent field of inquiry they went to great lengths to establish the autonomy of chemical secretions in general and their independence from nervous control in particular Bayliss W M and Starling E H 1902 The mechanism of pancreatic secretion *Physiol* 28 325 They argued with Pavlov who said that there was a strong influence of the nervous system on the gastrointestinal phenomena the endocrinologists were studying For several decades the English physiologists prevailed at least in the West and Pavlov's critique was not taken to heart by the practitioners of the newly emerging discipline of endocrinology Through the work of Harris the Scharrers Sawyer Everett and others there has been something of a scientific detente in the latter half of this century the hybrid field of neuroendocrinology is now regarded as one of the corner stones of modern neural science and is of fundamental importance in basic and clinical endocrinology **Perspectives in Reproduction and Sexual Behavior** William Caldwell Young, American Association of Anatomists, 1968 *Autonomic Failure* Roger Bannister, 1988 This thoroughly updated edition begins with a new set of chapters on the structures and function of autonomic integration The text is comprehensive going beyond strictly neurological aspects in its coverage of sexual and bladder function the gut fainting cardiac arrhythmias pain syndromes causalgia sweating disturbances porphyria

the histochemistry and electronmicroscopy of autonomic ganglia and the new techniques of microneuronography

Congress, Alberti Daniel François Addink, 1982 Exogenous and Endogenous Influences on Metabolic and Neural Control Volume 1 Invited Lectures covers the proceedings of the Third Congress of the European Society for Comparative Physiology and Biochemistry The book presents 35 papers that cover various aspects in the control of physiological activities in animals The text first details the origin of physiology and comparative physiology Next the book covers papers that deal with different physiological systems which include feeding respiration reproduction osmoregulation and perception The text will be of great use to students re *Psychobiology of Reproductive Behavior*, 1987

Reproductive Behavior William Montagna, 1974-09-01 Sexual compatibility between male and female partners is indispensable to normal and successful fertilization in mammals Thus the genes from males and females whose sexual behavior is characterized by awkwardness ineptness and miscues are eliminated from the gene pool of the species In human societies this compatibility is not always evident and the behavior that precedes and accompanies copulation and fertilization is exceedingly complex and affected by many variables As in most other species of animals the entire repertoire of reproductive behavior of man is not well understood by man When viewed discussed or reported the topic is too often and most unfortunately regarded as an amalgam of emotion mysticism and biology In the past such emotion charged approaches to the biological fact of reproduction did much to obfuscate the subject and as a result much of the array of hormonal neural psychological and social variables that control and insure the successful reproduction of the human species remains even now in Victorian ignorance But with the recent rash of books and scientific treatises on the subject some progress has been made in elucidating human reproduction and associated sexual behavior However so entrenched are some of our social taboos that the danger still lurks of equating social acceptance of the words with an understanding all too lacking of the process to which they refer Proceedings of the Third International Symposium of the Reproductive Physiology of Fish David R.
