Artificial Intelligence for Advanced Problem Solving Techniques Vlahavas, Ioannis, Vrakas, Dimitris, 2008-01-31

One of the most important functions of artificial intelligence automated problem solving consists mainly of the development of software systems designed to find solutions to problems These systems utilize a search space and algorithms in order to reach a solution Artificial Intelligence for Advanced Problem Solving Techniques offers scholars and practitioners cutting edge research on algorithms and techniques such as search domain independent heuristics scheduling constraint satisfaction optimization configuration and planning and highlights the relationship between the search categories and the various ways a specific application can be modeled and solved using advanced problem solving techniques

Computer Science Handbook Allen B. Tucker, 2004-06-28 When you think about how far and fast computer science has progressed in recent years it s not hard to conclude that a seven year old handbook may fall a little short of the kind of reference today s computer scientists software engineers and IT professionals need With a broadened scope more emphasis on applied computing and more than 70 chap

Principles of Logic and Logic Programming G. Metakides, A. Nerode, 1996-06-13 Logic s basic elements are unfolded in this book The relation of and the transition from Logic to Logic Programming are analysed With the use and the development of computers in the beginning of the 1950 s it soon became clear that computers could be used not only for arithmetical computation but also for symbolic computation Hence the first arithmetical computation programs and the first programs created to answer elementary questions and prove simple theorems were written simultaneously The basic steps towards a general method based on Logic were accomplished in 1965 by Robinson and later by Kowalski and Colmerauer who made use of Logic directly as a Logic Programming language Each chapter includes solved as well as unsolved exercises provided to help the reader assimilate the corresponding topics The solved exercises demonstrate how to work methodically whereas the unsolved exercises aim to stimulate the reader s personal initiative The contents of the book are self contained only an elementary knowledge of analysis is required Thus it can be used by students in every academic year as simply reading material or in the context of a course It can also be used by those who utilize Logic Programming

without having any particular theoretical background knowledge of Logic or by those simply interested in Logic and its applications in Logic Programming **Deductive Databases and Their Applications** Robert Colomb,2003-09-02

Deductive Databases and their Applications is an introductory text aimed at undergraduate students with some knowledge of database and information systems The text comes complete with exercises and solutions to encourage students to tackle problems practically as well as theoretically The author presents the origins of deductive databases in Prologue before proceeding to analyse the main deductive database paradigm the data log model The final chapters are dedicated to closely related topics such as prepositional expert systems integrity constraint specification and evaluation and update propagation Particular attention is paid to CASE tool repositories Artificial Intelligence Research and Development K. Gibert,V. Botti,R. Reig-Bolaño,2013-10-09

For almost twenty years the Catalan Association of Artificial Intelligence ACIA has been promoting cooperation between researchers in artificial intelligence within the Catalan speaking community This book presents the proceedings of the 16th International Conference CCIA 2013 held at the University of Vic UVIC Catalonia Spain in October 2013 This annual conference aims to foster discussion of the latest developments in artificial intelligence within the community of Catalan countries as well as amongst members of the AI community worldwide The book contains the 26 full papers 5 short papers and 12 poster presentations from the conference which are grouped under the following topics relational learning planning satisfiability and constraints perception and image processing preprocessing patterns extraction and learning post processing model interpretability and decision support recommenders similarity and CBR and multiagent systems **Computers and Artificial Intelligence** ,1994 **A Guided Tour of Artificial Intelligence Research** Pierre Marquis,Odile Papini,Henri Prade,2020-05-08

The purpose of this book is to provide an overview of AI research ranging from basic work to interfaces and applications with as much emphasis on results as on current issues It is aimed at an audience of master students and Ph D students and can be of interest as well for researchers and engineers who want to know more about AI The book is split into three volumes the first volume brings together twenty three chapters dealing with the foundations of knowledge representation and the formalization of reasoning and learning Volume 1 Knowledge representation reasoning and learning the second volume offers a view of AI in fourteen chapters from the side of the algorithms Volume 2 AI Algorithms the third volume composed of sixteen chapters describes the main interfaces and applications of AI Volume 3 Interfaces and applications of AI Implementing reasoning or decision making processes requires an appropriate representation of the pieces of information to be exploited This first volume starts with a historical chapter sketching the slow emergence of building blocks of AI along centuries Then the volume provides an organized overview of different logical numerical or graphical representation formalisms able to handle incomplete information rules having exceptions probabilistic and possibilistic uncertainty and beyond as well as taxonomies time space preferences norms causality and even trust and emotions among agents Different types of reasoning beyond classical deduction are surveyed

including nonmonotonic reasoning belief revision updating information fusion reasoning based on similarity case based interpolative or analogical as well as reasoning about actions reasoning about ontologies description logics argumentation and negotiation or persuasion between agents Three chapters deal with decision making be it multiple criteria collective or under uncertainty Two chapters cover statistical computational learning and reinforcement learning other machine learning topics are covered in Volume 2 Chapters on diagnosis and supervision validation and explanation and knowledge base acquisition complete the volume
