*Principles of Database Query Processing for Advanced Applications* Clement T. Yu, Weiyi Meng, 1998 The aim of query processing is to find information in one or more databases and deliver it to the user quickly and efficiently Traditional techniques work well for databases with standard single site relational structures but databases containing more complex and diverse types of data demand new query processing and optimization techniques Most real world data is not well structured Today s databases typically contain much non structured data such as text images video and

audio often distributed across computer networks In this complex milieu typified by the world wide Web efficient and accurate query processing becomes quite challenging Principles of Database Query Processing for Advanced Applications teaches the basic concepts and techniques of query processing and optimization for a variety of data forms and database systems whether structured or unstructured This is the only reference work that covers query processing and optimization techniques for structured and unstructured data written with the non expert in mind with a minimum of mathematical details This book teaches query processing techniques for multimedia object oriented deductive parallel and distributed databases as well as heterogeneous multidatabase systems fuzzy relational databases and techniques for different types of unstructured data Each chapter contains examples tables and figures class exercises and a detailed bibliography
