Neutral Interfaces In Design Simulation And Programming For Robotics:

Neutral Interfaces in Design, Simulation, and Programming for Robotics Ingward Bey, D. Ball, H. Bruhm, T. Clausen, W. Jakob, O. Knudsen, E.G. Schlechtendahl, T. Sorensen, 1994 Product Data Technology encompasses the information related to all stages in the product life cycle from product design via production planning production processes production control etc through the delivery and operational stages of the technical product Product Data Technology takes a coherent unified view of the information captured in this whole life cycle and provides methodologies to support this integrated perspective The Product Data Technology Advisory Group pDTAG is a Special Interest Group supported by the CIME Division within DG m of the European Commission Founded in 1991 the PDTAG has encouraged the formation of a new subseries on Product Data Technology within the existing series of Research Reports ESPRIT This subseries will provide a depository for the important contributions made by ESPRIT projects to the evolving area of Product Data Technology particularly also those based on the STEP ISO 10303 PDTAG is grateful to Springer Publishers for establishing this subseries which will serve to report recent international developments in Product Data Technology

Neutral Interfaces in Design, Simulation, and Programming for Robotics Ingward Bey, 1994 ESPRIT the European Specific Research and Technological Development Programme in the field of Information Technologies was set up in 1984 as a cooperative research programme involving European IT companies large and small and academic institutions Managed by DG III of the European Commission its aim is to contribute to the development of a competitive industrial base in an area of crucial importance for the entire European economy The current phase of ESPRIT the third comprises five technological areas Microelectronics Design and Engineering Technology for Software Intensive Systems High Performance Computing and its Applications Advanced Business and Home Systems plus Peripherals Computer Integrated Manufacturing and Engineering Basic Research and the Open Microprocessor Systems Initiative which draws on all other areas of the programme The series Research Reports ESPRIT is helping to disseminate the many results products and services tools and methods and international standards arising from the hundreds of projects involving thousands of researchers that have already been launched

Robot Control 1991 (SYROCO'91) I. Troch, 2014-05-23 This volume contains 92 papers on the state of the art in robotics research In this volume topics on modelling and identification are treated first as they build the basis for practically all control aspects Then the most basic control tasks are discussed i e problems of inverse kinematics Groups of papers follow which deal with various advanced control aspects They range from rather general methods to more specialized topics such as force control and control of hydraulic robots The problem of path planning is addressed and strategies for robots with one arm for mobile robots and for multiple arm robots are presented Also covered are computational improvements and software tools for simulation and control the integration of sensors and sensor signals in robot control

Sharing CIM Solutions Jørgen K. H. Knudsen, J. K. H. Knudsen, P. MacConaill, J. Bastos, 1994 This work is the result of the proceedings of the 10th Annual Conference 94 ESPRIT

CIM Europe It reports on the results in development and implementation of CIM technologies The key technologies which are being developed and the results emerging from the collaborative projects have contributed to the establishment of an integrative approach to manufacturing problems which embraces engineering logistics process automation business functions organizational and environmental concerns **Robot Control 1988 (SYROCO'88)** U. Rembold,2014-05-23

Containing 88 papers the emphasis of this volume is on the control of advanced robots These robots may be self contained or part of a system The applications of such robots vary from manufacturing assembly and material handling to space work and rescue operations Topics presented at the Symposium included sensors and robot vision systems as well as the planning and control of robot actions Main topics covered include the design of control systems and their implementation advanced sensors and multisensor systems explicit robot programming implicit task orientated robot programming interaction between programming and control systems simulation as a programming aid AI techniques for advanced robot systems and autonomous robots **MMS: A Communication Language for Manufacturing** Consortium CCE-CNMA,2013-11-11

Today s manufacturing environment is characterised by significant change in the way it is able to respond to its business objectives Companies now face new challenges to meet customer demands including greater flexibility a wider range of products higher quality improved lead time whilst maintaining competitive prices The changes manifest in each company will differ but the trend is towards providing a leaner more responsive organisation This is reflected in the need for Information Technology IT systems to be more integrated across an enterprise and for the systems to be provided on a distributed basis At the same time it is imperative that the costs associated with these IT systems and the range of skills required by an enterprise to develop and support such systems should be minimal One way of achieving this objective is to adopt the use of standards During recent years there has been a lot of activity to standardise the way that manufacturing devices communicate with each other Considerable progress has been made thanks not least to the success of the international effort of standardisation bodies like ISO IEEE and IEC and projects applying standardised protocols like Manufacturing Automation Protocol MAP in the USA Communications Network for Manufacturing Applications CNMA in Europe and not forgetting Mini MAP and Fieldbus technology *Interoperability of Standards for Robotics in CIME* Falk Mikosch,1996-11-18 The earlier ESPRIT Projects CAD I ESPRIT 322 and NIRO ESPRIT 5109 have made significant contributions to the foundations of Product Data Technology particularly in the standardisation of product descriptions and robot kinematics in STEP ISO 10303 and in robotics programming languages InterRob ESPRIT 6457 their direct successor has been building on these results and has extended them to mature applications of Product Data Technology for robotics in high precision manufacturing The InterRob approach is based on standardised models for product geometry kinematics robotics dynamics and control hence on a coherent neutral information model of the process chain from design to manufacturing This process thus supports product design analysis simulation robot programming and control by a flexible

chain of software modules connected by neutral interfaces The approach enables the off line programming of robots relying on CAD product definitions thus avoiding the much more tedious and inflexible teach in programming This capability is a key advantage in one of a kind production Applications in plasma spraying of high precision parts in the aerospace industry and robot welding of complex pipe connections in shipbuilding demonstrate the viability of the approach The economic success of the methodology is based on the built in quality control for the information flow and on significant time and cost savings InterRob has also made valuable contributions to PDT standardisation both by relying on existing and evolving standards ISO STEP AP 203 AP 214 and by extending these models particularly for robotics Industrial Assembly Shimon Y. Nof, Wilbert E. Wilhelm, H. Warnecke, 2012-12-06 Industrial Assembly is a rapidly changing field with significant importance in production This book is the first of its kind to combine technology design methods and planning and control models of assembly operations and systems With the increasing importance of assembly in industry and of simultaneous engineering approaches this timely publication provides comprehensive coverage of technological engineering and management aspects of this field multi disciplinary approaches to rationalization of assembly operations and systems explanation of qualitative models information technologies and design techniques which have been practised effectively in industrial assembly as well as theoretical foundations and emerging trends that shape the future of assembly **Computer Aided Concurrent Integral Design** Rolf F. Schmidt, Martin Schmidt, 1996-05-03 The Esprit Research Reports series is helping to disseminate the many results products and services tools and methods and international standards arising from the hundreds of projects involving thousands of researchers that have already been launched BOOK JACKET *ESPRIT '90* CEC, DG for Telecommunications, 2012-12-06 The 1990 ESPRIT Conferene is being held in Brussels from the 12th November to the 15th November Well over 1700 participants from all over Europe and overseas are expected to attend the various events The Conference will offer the opportunity to be updated on the results of the ESPRIT projects and Basic Research actions and to develop international contacts with colleagues both within a specific branch of Information Technology and across different branches The first three days of the Conference are devoted to presentations of Esprit projects and Basic Research actions structured into plenary and parallel sessions the scope of the Conference has been broadened this year by the inclusion of several well known international speakers All areas of Esprit work are covered Microelectronics Information Processing Systems Office and Business Systems Computer Integrated Manufacturing Basic Research and aspects of the Information Exchange System During the IT Forum on Thursday November 15th major European industrial and political decision makers will address the audience in the morning In the afternoon a Round Table will discuss the impact of Information Technology on society More than 100 projects and actions will display their major innovations and achievements at the Esprit Exhibition which will be for the first time open to the general public *Sourcebook on Robots in Manufacturing*, 1995 **Advanced Manufacturing Processes, Systems, and Technologies** M.
