## Meta Level Inference Systems:

*Meta-level Inference Systems* Frank Van Harmelen, 1991      **Meta-level Inference Systems** Frank Van Harmelen, 1991

*Extensions of Logic Programming* Roy Dyckhoff, 1994-05-20 The papers in this volume are extended versions of presentations at the fourth International Workshop on Extensions of Logic Programming held at the University of St Andrews March April 1993 Among the topics covered in the volume are definitional reflection and completion modules in lambda Prolog representation of logics as partial inductive definitions non procedural logic programming knowledge representation contradiction avoidance disjunctive databases strong negation linear logic programming proof theory and regular search spaces finite sets and constraint logic programming search space pruning and universal algebra and implementation on transputer networks      The Impact of Emerging Technologies on Computer Science and Operations Research Stephen G.

Nash, Ariela Sofer, 2012-12-06 The emergence of high performance computers and sophisticated software technology has led to significant advances in the development and application of operations research In turn the growing complexity of operations research models has posed an increasing challenge to computational methodology and computer technology This volume focuses on recent advances in the fields of Computer Science and Operations Research on the impact of technological innovation on these disciplines and on the close interaction between them The papers cover many relevant topics computational probability design and analysis of algorithms graphics heuristic search and learning knowledge based systems large scale optimization logic modeling and computation modeling languages parallel computation simulation and telecommunications 1 This volume developed out of a conference held in Williamsburg Virginia January 5 7 1994 It was sponsored by the Computer Science Technical Section of the Operations Research Society of America The conference was attended by over 120 people from across the United States and from many other countries We would like to take this opportunity to thank the participants of the conference the authors the anonymous referees and the publisher for helping produce this volume We express our special thanks to Bill Stewart and Ed Wasil for serving as Area Editors

*Agent-Oriented Programming* Matthew M. Huntbach, Graem A. Ringwood, 2003-07-31 A book that furnishes no quotations is me judice no book it is a plaything TL Peacock Crochet Castle The paradigm presented in this book is proposed as an agent programming language The book charts the evolution of the language from Prolog to intelligent agents To a large extent intelligent agents rose to prominence in the mid 1990s because of the World Wide Web and an ill structured network of multimedia information Age oriented programming was a natural progression from object oriented programming which C and more recently Java popularized Another strand of influence came from a revival of interest in robotics Brooks 1991a 1991b The quintessence of an agent is an intelligent willing slave Speculation in the area of artificial slaves is far more ancient than twentieth century science fiction One documented example is found in Aristotle s *Politics* written in the fourth century BC Aristotle classifies the slave as an animate article of property He suggests that slaves or subordinates might not

be necessary if each instrument could do its own work at command or by anticipation like the statues of Daedalus and the tripods of Hephaestus Reference to the legendary robots devised by these mythological technocrats the former an artificer who made wings for Icarus and the latter a blacksmith god testify that the concept of robot if not the name was ancient even in Aristotle's time
