Selective Oxidation Processes Proc:

Advanced Short-time Thermal Processing for Si-based CMOS Devices Fred Roozeboom, 2003 **Nanostructured Materials**, 2001-12-18 This thematic volume of *Advances in Chemical Engineering* presents the latest advances in the exciting interdisciplinary field of nanostructured materials. Written by chemical engineers, chemists, physicists, materials scientists, and bioengineers, this volume focuses on the molecular engineering of materials at the nanometer scale for unique size-dependent properties. It describes a bottom-up approach to designing nanostructured systems for a variety of chemical, physical, and biological applications.

Fluidized-Bed Reactors: Processes and Operating Conditions John G. Yates, Paola Lettieri, 2016-09-27 The fluidized bed reactor is the centerpiece of industrial fluidization processes. This book focuses on the design and operation of fluidized beds in many different industrial processes, emphasizing the rationale for choosing fluidized beds for each particular process. The book starts with a brief history of fluidization from its inception in the 1940s. The authors present both the fluid dynamics of gas-solid fluidized beds and the extensive experimental studies of operating systems, and they set them in the context of operating processes that use fluid bed reactors. Chemical engineering students and postdocs, as well as practicing engineers, will find great interest in this book.

Chemical Micro Process Engineering Volker Hessel, Holger Löwe, Andreas Müller, Gunther Kolb, 2006-03-06 Micro process engineering is approaching both academia and industry. With the provision of micro devices, systems, and whole plants by commercial suppliers, one main barrier for using these units has been eliminated. This book focuses on processes and their plants rather than on devices, what is before, behind, and around micro device fabrication, and gives a comprehensive and detailed overview on the micro reactor plants and three topic class applications, which are mixing, fuel processing, and catalyst screening. Thus, the book reflects the current level of development from micro reactor design to micro reactor process design.

Electrochemical and Metallurgical Industry, 1922 **Chemical & Metallurgical Engineering** Eugene Franz Roeber, Howard Coon Parmelee, 1921 Direct Natural Gas Conversion to Value-Added Chemicals Jianli Hu, Dushyant Shekhawat, 2020-09-24 *Direct Natural Gas Conversion to Value-Added Chemicals* comprehensively discusses all major aspects of natural gas conversion and introduces a broad spectrum of recent technological developments. Specifically, the book describes heterogeneous and homogeneous catalysis, microwave-assisted conversion, non-thermal plasma conversion, electrochemical conversion, and novel chemical looping conversion approaches. Provides an excellent benchmark resource for the industry and academics. Appeals to experienced researchers as well as newcomers to the field despite the variety of contributing authors and the complexity of the material covered. Includes all aspects of direct natural gas conversion: fundamental chemistry, different routes of conversion, catalysts, catalyst deactivation, reaction engineering, novel conversion concepts, thermodynamics, heat and mass transfer issues, system design, and recent research and development. Discusses new developments in natural gas conversion and future challenges and opportunities. This book is an excellent resource for advanced students.
