Numerical Modeling of the Global Atmosphere in the Climate System Philip Mote, Alan O'Neill, 2000-04-30 21 Simulating Future Climate G J Boer 1 Introduction 489 2 International Aspects 490 3 Simulating Historical and Future Climate 492 4 Climate Change in the 20th Century 495 5 Simulating Future Climate Change 498 6 Climate Impact Adaptation and Mitigation 501 7 Summary 502 Index 505 PREFACE Numerical modeling of the global atmosphere has entered a new era. Whereas atmospheric modeling was once the domain of a few research units at universities or government laboratories it can now be performed almost anywhere thanks to the affordability of computing power. Atmospheric general circulation models (GCMs) are being used by a rapidly growing scientific community in a wide range of applications. With widespread interest in anthropogenic climate change, GCMs have a role also in informing policy discussions. Many of the scientists using GCMs have backgrounds in fields other than atmospheric sciences and may be unaware of how GCMs are constructed. Recognizing this explosion in the application of GCMs we organized a two week course in order to give young scientists who are relatively new to the field of atmospheric modeling a thorough grounding in the basic principles on which GCMs are constructed, an insight into their strengths and weaknesses and guidance on how meaningful numerical experiments are formulated and analyzed. Sponsored by the North Atlantic Treaty Organization (NATO) and other institutions this Advanced Study Institute (ASI) took place May 25 - June 5 1998 at Il Ciocco, a remote hotel on a Tuscan hillside in Italy.

Flexible Global Ocean-Atmosphere-Land System Model Tianjun Zhou, Yongqiang Yu, Yimin Liu, Bin Wang, 2013-11-19 Coupled climate system models are of central importance for climate studies. A new model known as FGOALS, the Flexible Global Ocean Atmosphere Land System model, has been developed by the State Key Laboratory of Numerical Modeling for Atmospheric Sciences and Geophysical Fluid Dynamics, Institute of Atmospheric Physics, Chinese Academy of Sciences, LASG IAP CAS, a first tier national geophysical laboratory. It serves as a powerful tool both for deepening our understanding of fundamental mechanisms of the climate system and for making decadal prediction and scenario projections of future climate change. Flexible Global Ocean Atmosphere Land System Model: A Modeling Tool for the Climate Change Research Community is the first book to offer systematic evaluations of this model's performance. It is comprehensive in scope, covering both developmental and application oriented aspects of this climate system model. It also provides an outlook of future development of FGOALS and offers an overview of how to employ the model. It represents a valuable reference work for researchers and professionals working within the related areas of climate variability and change. Prof. Tianjun Zhou, Yongqiang Yu, Yimin Liu, and Bin Wang work at LASG, the Institute of Atmospheric Physics, Chinese Academy of Sciences, China.

Arctic Climate Impact Assessment - Scientific Report Arctic Climate Impact Assessment, 2005-11-07 Arctic Climate Impact Assessment was prepared by an international team of over 300 scientists, experts, and knowledgeable members of indigenous communities and is the most comprehensive volume on Arctic climate change available. Illustrated in

full color throughout **From Turbulence to Climate** Martin Beniston,1998 This volume covers aspects of numerical modeling of the atmosphere and climate from the microscales of turbulence to the very large scales associated with climate and climatic change Each of the three major spatio temporal scales of the atmosphere namely the microscale the mesoscale and the macroscale is addressed through a hierarchy of models Results of model simulations are illustrated throughout the text with many of these examples based on the author s original research work For each type of model discussed here the theoretical background including governing equation sets simplifying assumptions and advantages and limits of the models is provided An attempt is made throughout the book to highlight interdisciplinary nature of atmospheric modelling
